USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any companys products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR

OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 9C Medway Road, PMB 274, Milford, MA 01757, U.S.A.

TRADEMARKS

CORBA[®], CORBA logos[®], FIBO[®], Financial Industry Business Ontology[®], Financial Instrument Global Identifier[®], IIOP[®], IMM[®], Model Driven Architecture[®], MDA[®], Object Management Group[®], OMG[®], OMG Logo[®], SoaML[®], SOAML[®], SysML[®], UAF[®], Unified Modeling Language[™], UML[®], UML Cube Logo[®], VSIPL[®], and XMI[®] are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see: https://www.omg.org/legal/tm_list.htm. All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.

OMG'S ISSUE REPORTING PROCEDURE

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under Documents, Report a Bug/Issue.

Table of Contents

0 Preface	23
1 Scope	1
2 Conformance	3
3 Normative References.	5
4 Terms and Definitions.	7
5 Symbols	9
6 Introduction	11
6.1 Mapping Approach	11
6.2 Acknowledgements	11
7 Mappings	13
7.1 Overview	13
7.2 Foundations	13
7.2.1 Overview	13
7.2.2 Foundational class specifications	14
7.2.2.1 UniqueMapping

0 Preface

OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG's specifications implement the Model Driven Architecture[®] (MDA[®]), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG's specifications include: UML[®] (Unified Modeling LanguageTM); CORBA[®] (Common Object Request Broker Architecture); CWMTM (Common Warehouse Metamodel); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at https://www.omg.org/.

OMG Specifications

As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG Specifications are available from the OMG website at: https://www.omg.org/spec

All of OMG's formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters 9C Medway Road, PMB 274 Milford, MA 01757 USA

Tel: +1-781-444-0404 Fax: +1-781-444-0320

Email: pubs@omg.org

Certain OMG specifications are also available as ISO standards. Please consult https://www.iso.org

Issues

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under Specifications, Report an Issue.

1 Scope

This specification describes a transformation for a semantic translation from SysML v1 [SysMLv1] to SysML v2 [SysMLv2] in a precise way. (In this document, "SysML v1" refers to SysML v1.7, the last version of SysML prior to v2.0, and "SysML v2" refers to SysML v2.0, or whatever version corresponds to the current version of this specification.)

The main intent is to provide the rules on which automated conversions of SysML v1 models to the SysML v2 standard can be developed. In addition, this annex can be considered an educational document that provides useful information for people who would like to compare using SysML v2 and using SysML v1.

More sophisticated applications of this transformation can also be envisaged. For instance, a SysML v1 conformant tool could use this transformation to implement a limited subset of the SysML v2 API that will provide "SysMLv2-like" read-only access to its SysMLv1 models for external applications.

2 Conformance

A tool shall demonstrate *conformance* with this specification by meeting all of the following requirements.

- 1. The tool shall implement the UML4SysML abstract syntax and SysML v1 profile conformant with [SysMLv1]. The tool should, but is not required, to provide the ability to import a SysML v1 model using standard XMI Model Interchange format [XMI].
- 2. The tool shall implement the SysML v2 abstract syntax conformant with [SysML v2]. The tool should, but is not required, to provide the ability to export a SysML v2 model KerML-standard model interchange project (see [KerML], Clause 10; see also [SysML v2], Clause 2).
- 3. The tool shall implement a transformation from an abstract syntax representation of an input SysML v1 model to the abstract syntax representation of an output SysML v2, as specified in view link does not exist of this specification.

A tool may claim *partial conformance* with this specification by satisfying the first two requirements above, but only implementing an identified subset of the mappings specified in view link does not exist and view link does not exist. (Note that care must also be taken that certain mappings depend on other mappings, and so cannot reasonably be implemented separately.)

Note. A tool that conforms to [SysMLv2] is not required to necessarily implement a transformation conformant with this specification, or it may implement a SysML v1 to v2 transformation that is not claimed to conform with the transformation defined in this specification.

6 Introduction

6.1 Mapping Approach

The SysML v1 to v2 transformation is specified by directional mappings between UML metaclasses or stereotypes that are part of the SysML v1 specification [SysMLv1] (referenced below as the "SysML v1 scope") on the one hand, and the set of the metaclasses defined in the KerML [KerML] and SysMLv2 [SysMLv2] specifications (referenced below as "SysML v2") in the other hand. Some library classes are also involved.

Each mapping is a directed relationship that reifies a semantic link between a concept belonging to the SysML v1 scope on the source side and one concept belonging to SysML v2 (or one conforming library element) on the target side. As a set, those mappings constitute a declarative specification of a formal transformation that describes how the information encoded by the SysML v1 concepts can be reliably represented using constructs of SysML v2 metaclass instances.

In this approach, a mapping is represented by a UML class that has a pair of associations. One provides the from end that designates the source SysML v1 concept, while the other provides the to end that designates the target SysML v2 metaclass.

In addition to those associations, a mapping class provides a set of operations defining how the values of nonderived properties of the target metaclass instance have to be computed based on property values reachable from the source object. The computation algorithm is provided by the body condition of those operations and expressed using OCL code.

Note that the values assigned to the properties of the target object shall be instances of SysML v2 metaclasses, coming themselves from transformations of SysMLv1 objects to SysMLv2 objects. Since the specification is declarative, the order in which the individual transformations shall happen is not imposed. It is up to a conforming implementation to deal with this. Instead, the <code>getMapped</code> static operation is provided for referring to the result of a transformation from within an OCL rule. It returns a (possibly undefined) value, that is typed by the target metaclass of the mapping class from which it is invoked.

Each mapping class enables the transformation of any object that has the type specified by the from role to an object of the type specified by the to role, as long as it is not overloaded by a more specific mapping definition. In other words, assume a mapping is specified for the class A (i.e., it has A typing its from property), then it applies to any instance of a class B if B is a subclass of A and if there is no specialization of that mapping class specified for B (i.e., that has B typing its from property).

It is possible to restrict the applicability of a mapping specification to a specific subset of objects. This is achieved by the filter static operation that is evaluated against each candidate object. Only objects of the appropriate type for which this filter operation returns true shall be translated according to the specifications of that mapping class. The default filter operation always returns true.

Some mapping classes have one or more qualifiers for their to attribute. In such a case, each of those qualifiers reflects the specific property of the source type (i.e. the type of the from attribute) that has the same name and the same type. For those specific mappings, it is expected to get one instance of the target class (as specified by the type of the to attribute") for each actual combination of value of those properties for a given instance of object of the source type, assuming they pass the applicability filter as described above.

6.2 Acknowledgements

The primary authors of this specification document (and also developers of a proof-of-concept implementation of it) are:

- · Yves Bernard, Airbus
- Tim Weilkiens, oose

The specification was formally submitted for standardization by the following organizations:

- 88 solutions Corporation
- Dassault Systèmes
- GfSE e.V.
- IBM
- INCOSE
- · Intercax LLC
- · Lockheed Martin Corporation
- MITRE
- Model Driven Solutions, Inc.
- PTC
- Simula Research Laboratory AS
- Thematix Partners LLC

However, work on the specification was also supported by over 200 people in over 80 organizations that participated in the SysML v2 Submission Team (SST), by contributing use cases, providing critical review and comment, and validating the language design. The following individuals had leadership roles in the SST:

- Manas Bajaj, Intercax LLC (API and services development lead)
- Yves Bernard, Airbus (v1 to v2 transformation co-lead)
- Bjorn Cole, Lockheed Martin Corporation (metamodel development co-lead)
- Sanford Friedenthal, SAF Consulting (SST co-lead, requirements V&V lead)
- Charles Galey, Lockheed Martin Corporation (metamodel development co-lead)
- Karen Ryan, Siemens (metamodel development co-lead)
- Ed Seidewitz, Model Driven Solutions (SST co-lead, pilot implementation lead)
- Tim Weilkiens, oose (v1 to v2 transformation co-lead)

The specification was prepared using CATIA No Magic modeling tools and the OpenMBEE system for model publication (http://www.openmbee.org), with the invaluable support of the following individuals:

- Tyler Anderson, No Magic/Dassault Systèmes
- Christopher Delp, Jet Propulsion Laboratory
- Ivan Gomes, Twingineer
- Doris Lam, Jet Propulsion Laboratory
- Robert Karban, Jet Propulsion Laboratory
- Christopher Klotz, No Magic/Dassault Systèmes
- John Watson, Lightstreet Consulting

7 Mappings

7.1 Overview

This Clause is organized in order to match the packages that subdivide the model of the transformation. The Foundations package gathers the abstract classes that represent the concepts on top of which the mapping approach is built. The next subclause presents a utility class named Helper that provides reusable operations that simplify the OCL statements defining the computation rules of target properties and make them more readable. Libraries play an important role in SysML v2, and a specific one has been created in order to represent semantics equivalent to those of UML/SysML concepts, where needed. It is presented in this subclause as well.

The three next subclauses are dedicated to initializers, factories and generic mappings, respectively. They do not specify mappings, strictly speaking. Instead, they factorize more or less advanced OCL code that will be reused by the actual mapping specifications that are contained in the two last subclauses. The first of them is dedicated to UML metaclass from the UML4SYSML scope, while the second deals with SysML stereotypes more specifically.

7.2 Foundations

7.2.1 Overview

The concepts defined by KerML/SysML v2 are relatively similar to those of UML/SysML v1, but the ways they are built are different. This makes the specification of the global transformation quite complex. In order to keep it manageable, specific kinds of foundational classes are provided. They represent concepts on which classical "model to model" transformation technologies rely:

- The mappings built on top of the abstract class Mapping shall be executed only when they are explicitly called. Each call shall produce a new target element, whatever the source element. It specifies a from property typed by the UML::CommonStructure::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of getMapped operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements.
- The mappings built on top of the abstract class UniqueMapping, specified as a specialization of the Mapping class, shall produce only one target element for a given source element, whatever the number of time they are called.
- The mappings built on top of the abstract class MainMapping, specified as a specialization of the UniqueMapping class, shall be systematically executed (i.e. implicitly called) for all the elements that match both theirs source type and filter. There can be at most one main mapping for a given source type and only one target element shall be produced for a given source element.

The corresponding classes are located the the Foundations package.

Sometimes, it is necessary to be able to generate elements in the target model without having to provide an explicit link with a source element. In such a case, a mapping class is not appropriate. Instead the mapping framework provides the concept of a Factory.

Last, the concept of an Initializer allows the factorization of the specification of properties' default values that can be inherited by mappings and factories, as convenient.

In the model of the transformation that is specified here, all of the abstract classes of this Foundations package are subject to direct or indirect subclassing. In other words, this specification is built as a set of interrelated initializers, factories, regular, unique and main mappings, where the initializers' operation factorizes the specification of default

values for their target element, wherever possible. Those "default operations" are either used as-is or redefined by mappings or factories that can inherit for a specific initializer, as appropriate.

7.2.2 Foundational class specifications

7.2.2.1 UniqueMapping

Description

The mappings built on top of the abstract class UniqueMapping are a specific kind of Mappings that are intended to produce only one target element for a given source element, whatever the number of time they are called. If a getMapped is called several time with the same source element, the target element returned shall always be the same.

Generalizations

• Mapping (from Foundations)

7.2.2.2 Factory

Description

Similarly to the well-known to the homonyms software design pattern, a Factory can be used for specifying the production of a target element without any link with a source element. Factories have in common with mapping classes the operations that specify how the properties of the target element shall be computed and the "to" property that specifies the type of the target element. However factories do not define source element. Instead, they can have parameters. Those parameters, if any, shall be specified by properties with appropriate types and multiplicities. Factories are expected to provide a "create" operation with parameters matching in type and multiplicity the properties that are intended to specify them.

Generalizations

• Initializer (from Foundations)

7.2.2.3 Mapping

Description

This is the generic abstract class that provides the basic features of any mapping class mapping. The mappings built on top of the abstract class Mapping are intended to be executed only when explicitly called (e.g. by the rule of another mapping class). It specifies a "from" property typed by the UML::CommonStructure::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of getMapped operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements. Each call to the getMapped operation shall produce a new target element, whatever the source element provided. Instances of Mapping class are represent a link between one source element and the target element produced by the transformation specified by that mapping class.

Generalizations

• Initializer (from Foundations)

Association Ends

• from: Element [1]

Operations

• filter (in src : Element) : Boolean [1] returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

true

• getMapped (in fromVar : Element) : Element [1]

postConditions:

• getMapped (in fromVar : Element, in qual : Element) : Element [1]

postConditions:

```
self.filter(fromVar) and
self.to.allFeatures()->selectByKind(UML::Property)->reject(isDerived)
->forAll(p | let ops: Operation = self.allFeatures()
    ->selectByKind(UML::Operation)->any(o | o.name = p.name) in
   if ops.ownedParameter
        ->select(p | p.direction = UML::ParameterDirectionKind:: 'in')
        ->size()=1 then
       p = ops(qual)
   else if ops.ownedParameter
        ->select(p | p.direction = UML::ParameterDirectionKind:: 'in')
        ->size()=0 then
       p = ops()
   else
       invalid
   endif endif) and
result = self.to
```

• getMappedColl (in fromColl : Element) : Element [0..*]

postConditions:

```
result = fromColl->collect(e | self.getMapped(e))
```

7.2.2.4 MainMapping

Description

The mappings built on top of the abstract class MainMapping are a specific kind of UniqueMappings class that are always implicitly called for any element in the source model that match both their source type (as specified by their

"from" property) and their filter condition. If more than one main mapping is specified for a given source type, they shall have filters that specify mutually exclusive conditions. Also, as with any unique mapping, only one target element shall be produced for a given source element.

Generalizations

• UniqueMapping (from Foundations)

7.2.2.5 Initializer

Description

The abstract class Initializer is the common ancestor of Mapping and Factory. It specifies a "to" property typed by the KerML::Root::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of target element. Initializers are intended to specify reusable properties' computation rules, mainly for initializing them with default values. Those rules will be inherited or redefined by the sub-classes, as appropriate.

Attributes

• /inputs [0..*]

Association Ends

• to : Element [1]

7.3 Mapping Helper and Library

7.3.1 Helper

Description

The Helper class contains operations that are used by multiple mapping classes. The specification is in the bodyCondition.

Operations

actionOwnedRelationship (in src : Element) : Relationship [0..*]
 Reusable mapping rule for owned relationships of a UML4SysML::Action mapping.

```
let actionInputPin: Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsTypeOf(UML::ActionInputPin)) in
let triggers: Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::Trigger)) in
let toElementFMS: Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::Pin)) in
let toElementOMS: Set(UML::Element) =
    (((src.ownedElement - toElementFMS) - actionInputPin) - triggers) in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(toElementFMS->collect(e | ElementFeatureMembership_Mapping.getMapped(e)))
```

activityOwnedRelationship (in src : Element) : Relationship [0..*]
 Reusable mapping rule for owned relationships of a UML4SysML::Activity mapping.

```
let initialNodes : Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::InitialNode)) in
let flowFinalNodes : Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::FlowFinalNode)) in
let ignoreActivityFinalNodes : Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::ActivityFinalNode)) in
let ignoreEdgesToActivityFinalNodes : Set(UML::Element) =
    src.ownedElement->select(e | e.oclIsKindOf(UML::ActivityEdge)
    and e.oclAsType(UML::ActivityEdge).target.oclIsTypeOf(UML::ActivityFinalNode)) in
let elementsFMS : Set(UML::Element) =
    (((src.ownedElement->select(e | e.oclIsKindOf(UML::ControlNode) or
    e.oclIsKindOf(UML::Action) or e.oclIsKindOf(UML::ControlFlow) or
    e.oclIsKindOf(UML::ObjectFlow) or e.oclIsKindOf(UML::Property))
    - initialNodes) - flowFinalNodes) - ignoreActivityFinalNodes)
    - ignoreEdgesToActivityFinalNodes in
let parameters: Set(UML::Parameter) =

->collect(e | ElementOwningMembership Mapping.getMapped(e))) in
if src.classifierBehavior.oclIsUndefined() then
    memberships
else
    memberships
    ->append(BehavioredClassifierFeatureMembership Mapping.getMapped(src))
endif
```

- createUUID () : String [1]
 - Creates a UUID. The specification is implementation-specific and therefore cannot provided here.
- excludedPin (in pin : Pin) : Boolean [1] Checks if a pin is excluded from the transformation, because it is already defined as a parameter in the

- getAppliedStereotypes (in element : Element) : Stereotype [0..*]
 Returns the list of applied stereotypes. The specification is implementation-specific and therefore cannot provided here.
- getEnumerationType (in t : Enumeration) : EnumerationDefinition [1] Maps a given UML4SysM::Enumeration to the appropriate SysML v2 EnumerationDefinition.

```
let enum: SYSML2::EnumerationDefinition =
   Enumeration Mapping.getMapped(t) in
if enum.oclIsKindOf(SYSML2::EnumerationDefinition) then
   enum
else if t.name = 'VerdictKind' then
        SYSML2::EnumerationDefinition.allInstances()
        ->any(e | e.qualifiedName = 'VerificationCases::VerdictKind')
     else if t = UML::ParameterDirectionKind then
       KerML::FeatureDirectionKind
        else if t.qualifiedName =
            'SysML::Libraries::ControlValues::ControlValueKind' then
            SYSML2::EnumerationDefinition.allInstances()
            ->any(e | e.qualifiedName =
                'SysMLv1Library::Enumerations::ControlValueKind')
            else
                SYSML2::EnumerationDefinition.allInstances()
                ->any(e | e.qualifiedName =
                    'SysMLv1Library::Enumerations::' + t.name)
            endif
        endif
   endif
endif
```

getFlowDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]
 Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```
if v.enumeration.qualifiedName =
   'SysML::Ports&Flows::FlowDirectionKind' then
   if v = SysML::FlowDirectionKind::_'out' then
        KerML::FeatureDirectionKind::_'out'
   else if (v = SysML::FlowDirectionKind:: 'in') then
```

```
KerML::FeatureDirectionKind::_'in'
else if (v = SysML::FlowDirectionKind::inout) then
        KerML::FeatureDirectionKind::inout
else
        invalid
   endif endif endif
else
   invalid
endif
```

- getID (in src: Element): String [1]
 Returns the identifier of a UML4SysML::Element. The specification is implementation-specific and therefore cannot provided here.
- getKerMLFeatureDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]
 Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```
if v.enumeration.qualifiedName =
    'SysML::Ports&Flows::FeatureDirectionKind' or
    v.enumeration.qualifiedName = 'SysML::Ports&Flows::FeatureDirection' then
    if v = SysML::FeatureDirectionKind::provided then
        KerML::FeatureDirectionKind::_'out'
    else if (v = SysML::FeatureDirectionKind::required) then
        KerML::FeatureDirectionKind::_'in'
    else if (v = SysML::FeatureDirectionKind::providedRequired) then
        KerML::FeatureDirectionKind::inout
    else
        invalid
    endif endif endif
else
    invalid
endif
```

• getKerMLParameterDirectionKind (in v : ParameterDirectionKind) : FeatureDirectionKind [1] Maps a given SysMLv1 parameter direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```
if v = UML::ParameterDirectionKind::_'in' then
    KerML::FeatureDirectionKind::_'in'
else if (v = UML::ParameterDirectionKind::return) then
    KerML::FeatureDirectionKind::out
else if (v = UML::ParameterDirectionKind::out) then
    KerML::FeatureDirectionKind::out
else if (v = UML::ParameterDirectionKind::inout) then
    KerML::FeatureDirectionKind::inout
else
    invalid
endif endif endif
```

• getKerMLVisibilityKind (in v : VisibilityKind) : VisibilityKind [1] Maps a given UML4SysML::VisibilityKind enumeration literal to a SysML v2 VisibilityKind enumeration literal.

```
if (v = UML::VisibilityKind::public) then
   KerML::VisibilityKind::public
else if (v = UML::VisibilityKind::protected) then
   KerML::VisibilityKind::protected
else if (v = UML::VisibilityKind::private) then
   KerML::VisibilityKind::private
else if (v = UML::VisibilityKind::package) then
   KerML::VisibilityKind::public
else
   invalid
endif endif endif
```

• getMetadataByName (in mdName : String) : AttributeDefinition [1] Returns the metadata attribute definition element for a given metadata name.

```
SYSML2::AttributeDefiniton.allInstances()->any(e | e.name = mdName)
```

• getRequirementStereotype (in element : NamedElement) : Stereotype [0..1] Returns the requirement stereotype for a given element.

```
let stereotypes: Set(UML::Stereotype) =
    Helper.getAppliedStereotypes(element) in
stereotypes->any(s | s.general->collect(g | g.qualifiedName)
->includes('SysML::Requirements::AbstractRequirement'))
```

• getScalarValueType (in t : DataType) : DataType [1]
Maps a given SysMLv1 primitive type to a SysMLv2 scalar value type.

```
if t.name = 'UnlimitedNatural' then
    SYSML2::DataType.allInstances()
    ->any(e | e.qualifiedName = 'ScalarValues::Natural')
else
    SYSML2::DataType.allInstances()
    ->any(e | e.qualifiedName = 'ScalarValues::' + t.name)
```

• getScalarValueTypeByName (in ptName : String) : DataType [1] Maps a given SysMLv1 primitive type name string to a SysMLv2 scalar value type.

```
SYSML2::DataType.allInstances()
->any(e | e.qualifiedName = 'ScalarValues::' + ptName)
```

- getTagValue (in element : Element, in stereotypeName : String, in tagValueName : String) [1] Returns the value of a stereotype property. The specification is implementation-specific and therefore cannot provided here.
- getTagValueAsElement (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [1]

 Returns the value of a stereotype property. The specification is implementation-specific and therefore cannot provided here.
- getTagValueAsElementColl (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [0..*]

Returns the value of a stereotype property as a collection. The specification is implementation-specific and therefore cannot provided here.

- getTagValueAsString (in element : Element, in stereotypeName : String, in tagValueName : String) : String [1]
 - Returns the value of a stereotype property as a string. The specification is implementation-specific and therefore cannot provided here.
- getTagValueAsStringColl (in element : Element, in stereotypeName : String, in tagValueName : String) : String [0..*]
 - Returns the value of a stereotype property as a string collection. The specification is implementation-specific and therefore cannot provided here.
- globalNamespace (): Namespace [1]

```
KerML::Package.allInstances()->any(p | p.owningNamespace->isEmpty())
```

- hasMainMapping (in element : Element) : Boolean [1]
- hasStereotypeApplied (in element : Element, in stereotypeName : String) : Boolean [1]
 Returns true if the given stereotype is applied to the element. The specification is implementation-specific and therefore cannot provided here.
- isConnectionDef (in association : Association) : Boolean [1] Checks if a UML4SysML::Association is mapped to a SysML v2 ConnectionDefinition.

```
-- Case 1: composite association with
-- multiplicity 1..1 on owner side
let case1: Boolean = association.memberEnd
->exists(e | not e.isComposite and e.lower=1) and
association.memberEnd->exists(e | e.isComposite) in
-- Case 2: association is not composite and
-- there is no owned end with multiplicity 0..*
let case2: Boolean = not association.memberEnd
->exists(e | e.isComposite) and
not association.ownedEnd
->exists(e | e.lower = 0 and e.upper = -1) in
association.oclIsTypeOf(UML::AssociationClass) or
case1 or
case2
```

- isInScope (in element : Element) : Boolean [1]
 - The isInScope operation is intended to define the scope on which the transformation will apply. If the isInScope operation return "true" for a given model element, this element shall be consider by the transformation. Especially, main mappings if any will apply to it. It shall be ignored otherwise.
- isRequirement (in element : Element) : Boolean [1]
 Checks whether the stereotype AbstractRequirement is applied to the given element.

```
let stereotypes: Set(UML::Stereotype) =
   Helper.getAppliedStereotypes(element) in
```

```
stereotypes->exists(s | s.general->collect(g | g.qualifiedName)
->includes('SysML::Requirements::AbstractRequirement'))
```

• packageOwnedRelationship (in src : Element) : Relationship [0..*]
Reusable mapping rule for owned relationships of a UML4SysML::Package mapping.

```
let useCaseAssociations : Set(UML::Association) =
    src.ownedType->select(e | e.oclIsKindOf(UML::Association))
    ->select(a | a.memberEnd->exists(e | e.type.oclIsKindOf(UML::UseCase))) in
let unmappedAssociations : Set(UML::Association) =
    src.ownedType->select(e | e.oclIsKindOf(UML::Association))
    ->reject(a | Helper.isConnectionDef(a)) in
let imports: Set(UML::PackageImport) =
    src.packageImport->select(pi | Helper.isInScope(pi.importedPackage)) in
let relationships: Set(SysMLv2::Relationship) =
    src.ownedComment->reject(c | c.annotatedElement->includes(src))->collect(c| CommentOwners
->union(((src.ownedType-useCaseAssociations)-unmappedAssociations)->collect(e | ElementOwning
->union(imports->collect(i | PackageImport Mapping.getMapped(i))->asSet())
->union(src.ownedElement->select(e | e.oclIsKindOf(UML::Dependency) or
e.oclIsKindOf(UML::InformationFlow) or e.oclIsKindOf(UML::Package)
or (e.oclIsKindOf(UML::InstanceSpecification) and
e.oclAsType(UML::InstanceSpecification).classifier->notEmpty()))
->collect(e | ElementOwningMembership Mapping.getMapped(e))->asSet()) in
if src.URI.oclIsUndefined() or src.URI = '' then
   relationships
else
   relationships->including(PackageURIMetadataMembership Mapping.getMapped(src))
endif
```

stateOwnedRelationship (in src : Element) : Relationship [0..*]
 Reusable mapping rule for owned relationships of a UML4SysML::State mapping.

```
let initialState : Set(UML::Element) =
    from.ownedElement->select(e | e.oclIsKindOf(UML::Pseudostate) and
    e.oclAsType(UML::Pseudostate).kind = UML::PseudostateKind::initial) in
let toElementOMS : Set(UML::Element) = from.ownedElement - initialState in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(initialState->collect(e | InitialStateMembership_Mapping.getMapped(e)))
```

7.3.2 SysML v1 Library

The SysML v1 library is a SysML v2 model library with metadata definitions for annotating some model elements resulting from a transformation from a SysML v1 model using the SysML v1 to SysML v2 transformation.

```
package SysMLv1Library {
    doc /*
    * The SysMLv1Library defines library elements and metadata for
    * SysML elements which cannot mapped to a SysML v2 element.
    */
    // Library elements
```

```

```

7.4 Initializers

7.4.1 Overview

The classes presented in this subclause provide set of rules that provide default values for all non-derived features of their target metaclasses. Intentionally, initializers do not specify any "source" element. This makes them easier to specialize but prevents them from being able to provide a computation algorithm for some target features. In such a case, the operation matching the feature will be specified as abstract.

7.4.2 Mapping Specifications

7.4.2.1 KerML Initializers

7.4.2.1.1 Annotating Element Init

Description

Initializes the properties of the SysML v2 element AnnotatingElement.

Generalizations

• Element Init (from KerMLInitializers)

Association Ends

• to : AnnotatingElement [1] (redefines: Element_Init::to)

Operations

• annotation () : Annotation [0..*]

Set{}

7.4.2.1.2 Annotation_Init

Description

Initializes the properties of the SysML v2 element Annotation.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to: Annotation [1]

Operations

- annotatedElement () : Element [1] {redefines target, abstract}
- annotatingElement (): AnnotatingElement [1] {redefines source, abstract}
- owningAnnotatedElement () : Element [0..1]

null

7.4.2.1.3 Association_Init

Description

Initializes the properties of the SysML v2 element Association.

Generalizations

- Classifier Init (from KerMLInitializers)
- Relationship Init (from KerMLInitializers)

Attributes

• to: Association [1]

7.4.2.1.4 Behavior_Init

Description

Initializes the properties of the SysML v2 element Behavior.

Generalizations

• Classifier_Init (from KerMLInitializers)

Attributes

• to : Behavior [1]

7.4.2.1.5 Classifier_Init

Description

Initializes the properties of the SysML v2 element Classifier.

Generalizations

• Type Init (from KerMLInitializers)

Attributes

• to : Classifier [1]

7.4.2.1.6 Comment_Init

Description

Initializes the properties of the SysML v2 element Comment.

Generalizations

• AnnotatingElement Init (from KerMLInitializers)

Association Ends

• to : Comment [1] (redefines: AnnotatingElement_Init::to)

Operations

- body () : String [1] {abstract}
- locale () : String [1]

null

7.4.2.1.7 Conjugation_Init

Description

Initializes the properties of the SysML v2 element Conjugation.

Generalizations

• Relationship Init (from KerMLInitializers)

Attributes

• to : Conjugation [1]

Operations

- conjugatedType (): Type [1] {redefines source, abstract}
- originalType (): Type [1] {redefines target, abstract}

7.4.2.1.8 Connector_Init

Description

Initializes the properties of the SysML v2 element Connector.

Generalizations

- Feature Init (from KerMLInitializers)
- Relationship Init (from KerMLInitializers)

Attributes

• to : Connector [1]

Operations

• isDirected (): Boolean [1]

false

7.4.2.1.9 Documentation_Init

Description

Initializes the properties of the SysML v2 element Documentation.

Generalizations

• Comment_Init (from KerMLInitializers)

Attributes

• to: Documentation [1]

7.4.2.1.10 Element_Init

Description

This is the general abstract class to be used as an ancestor for any class mapping specification.

Generalizations

• Initializer (from Foundations)

Association Ends

```
• to : Element [1] (redefines: Initializer::to)
```

Operations

```
aliasId (): String [0..*]
Set{}
declaredName (): String [0..1]
null
elementId (): String [1]
Helper.createUUID()
ownedRelationship (): Relationship [0..*]
Set{}
shortName (): String [0..1]
null
```

7.4.2.1.11 EndFeatureMembership_Init

Description

Initializes the properties of the SysML v2 element EndFeatureMembership.

Generalizations

• FeatureMembership_Init (from KerMLInitializers)

Attributes

• to : EndFeatureMembership [1]

7.4.2.1.12 Expression_Init

Description

Initializes the properties of the SysML v2 element Expression.

Generalizations

• Step_Init (from KerMLInitializers)

Attributes

• to : Expression [1]

7.4.2.1.13 Feature_Init

Description

Initializes the properties of the SysML v2 element Feature.

Generalizations

• Type Init (from KerMLInitializers)

Attributes

```
• to : Feature [1]
```

Operations

```
    direction (): FeatureDirectionKind [0..1]
    null
    isComposite (): Boolean [1]
    false
    isDerived (): Boolean [1]
```

false

• isEnd () : Boolean [1]

```
false
```

• isOrdered () : Boolean [1]

```
false
```

• isPortion (): Boolean [1]

```
false
```

• isReadOnly (): Boolean [1]

```
false
```

• isUnique () : Boolean [1]

true

30

7.4.2.1.14 FeatureChainExpression_Init

Description

Initializes the properties of the SysML v2 element FeatureChainExpression.

Generalizations

• OperatorExpression_Init (from KerMLInitializers)

Attributes

• to : FeatureChainExpression [1]

7.4.2.1.15 FeatureChaining_Init

Description

Initializes the properties of the SysML v2 element FeatureChaining.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to : FeatureChaining [1]

Operations

• chainingFeature (): Feature [1] {redefines target, abstract}

7.4.2.1.16 FeatureMembership_Init

Description

Initializes the properties of the SysML v2 element FeatureMembership.

Generalizations

- OwningMembership Init (from KerMLInitializers)
- TypeFeaturing Init (from KerMLInitializers)

Attributes

• to : FeatureMembership [1]

Operations

- ownedMemberFeature (): Feature [1] {redefines ownedMemberElement, abstract}
- ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberFeature()}
```

7.4.2.1.17 FeatureReferenceExpression_Init

Description

Initializes the properties of the SysML v2 element FeatureReferenceExpression.

Generalizations

• Expression Init (from KerMLInitializers)

Attributes

• to : FeatureReferenceExpression [1]

7.4.2.1.18 FeatureTyping_Init

Description

Initializes the properties of the SysML v2 element Feature Typing.

Generalizations

• Specialization Init (from KerMLInitializers)

Attributes

• to : FeatureTyping [1]

Operations

- type (): Type [1] {redefines general, abstract}
- typedFeature (): Feature [1] {redefines specific, abstract}

7.4.2.1.19 FeatureValue_Init

Description

Initializes the properties of the SysML v2 element FeatureValue.

Generalizations

• OwningMembership Init (from KerMLInitializers)

Attributes

• to : FeatureValue [1]

Operations

- featureWithValue (): Feature [1] {redefines ownedMemberElement, abstract}
- isDefault (): Boolean [1]

false

• isInitial (): Boolean [1]

```
false
```

• ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

```
Set{self.value()}
```

• value (): Expression [1] {redefines ownedMemberElement, abstract}

7.4.2.1.20 Function_Init

Description

Initializes the properties of the SysML v2 element Function.

Generalizations

• Behavior_Init (from KerMLInitializers)

Attributes

• to: Function [1]

7.4.2.1.21 Import_Init

Description

Initializes the properties of the SysML v2 element Import.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to : Import [1]

Operations

• importedMemberName () : String [0..1]

```
null
```

• isImportAll (): Boolean [1]

```
false
```

• isRecursive (): Boolean [1]

false

- source () : Element [1] {redefines source, abstract}
- target () : Element [1] {redefines target, abstract}
- visibility (): VisibilityKind [1]

KerML::VisibilityKind::public

7.4.2.1.22 Interaction_Init

Description

Initializes the properties of the SysML v2 element Interaction.

Generalizations

- Association Init (from KerMLInitializers)
- Behavior Init (from KerMLInitializers)

Attributes

• to: Interaction [1]

7.4.2.1.23 InvocationExpression_Init

Description

Initializes the properties of the SysML v2 element InvocationExpression.

Generalizations

• Expression_Init (from KerMLInitializers)

Attributes

• to: InvocationExpression [1]

7.4.2.1.24 ItemFlow_Init

Description

Initializes the properties of the SysML v2 element ItemFlow.

Generalizations

• Connector Init (from KerMLInitializers)

Attributes

• to: ItemFlow [1]

7.4.2.1.25 Membership_Init

Description

Initializes the properties of the SysML v2 element Membership.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to: Membership [1]

Operations

- memberElement () : Element [1] {redefines target, abstract}
- memberName (): String [0..1]

```
null
```

• memberShortName (): String [0..1]

```
null
```

- membershipOwningNamespace () : Element [0..*] {redefines source, abstract}
- visibility (): VisibilityKind [1]

```
KerML::VisibilityKind::public
```

7.4.2.1.26 MembershipImport_Init

Description

Initializes the properties of the SysML v2 element MembershipImport.

Generalizations

• Import Init (from KerMLInitializers)

Attributes

• to : MembershipImport [1]

Operations

• importedMembership (): Namespace [1] {redefines target, abstract}

7.4.2.1.27 Namespace_Init

Description

Initializes the properties of the SysML v2 element Namespace.

Generalizations

• Element_Init (from KerMLInitializers)

Association Ends

• to : Namespace [1] (redefines: Element_Init::to)

7.4.2.1.28 NamespaceImport_Init

Description

Initializes the properties of the SysML v2 element NamespaceImport.

Generalizations

• Import Init (from KerMLInitializers)

Attributes

• to : NamespaceImport [1]

Operations

• importedNamespace (): Namespace [1] {redefines target, abstract}

7.4.2.1.29 OperatorExpression_Init

Description

Initializes the properties of the SysML v2 element OperatorExpression.

Generalizations

• Expression_Init (from KerMLInitializers)

Attributes

• to : OperatorExpression [1]

Operations

• operator (): String [1]{abstract}

7.4.2.1.30 OwningMembership_Init

Description

Initializes the properties of the SysML v2 element OwningMembership.

Generalizations

• Membership Init (from KerMLInitializers)

Attributes

• to: OwningMembership [1]

Operations

- ownedMemberElement () : Element [1] {redefines memberElement, abstract}
- ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberElement()}
```

7.4.2.1.31 Package_Init

Description

Initializes the properties of the SysML v2 element Package.

Generalizations

• Namespace Init (from KerMLInitializers)

Attributes

• to: Package [1]

7.4.2.1.32 ParameterMembership_Init

Description

Initializes the properties of the SysML v2 element ParameterMembership.

Generalizations

• FeatureMembership Init (from KerMLInitializers)

Attributes

• to : ParameterMembership [1]

Operations

- ownedMemberParameter (): Feature [1] {redefines ownedMemberFeature, abstract}
- ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberParameter()}
```

7.4.2.1.33 Predicate_Init

Description

Initializes the properties of the SysML v2 element Predicate.

Generalizations

• Function Init (from KerMLInitializers)

Attributes

• to : Predicate [1]

7.4.2.1.34 Redefinition_Init

Description

Initializes the properties of the SysML v2 element Redefinition.

Generalizations

• Subsetting Init (from KerMLInitializers)

Attributes

• to: Redefinition [1]

Operations

- redefinedFeature (): Feature [1] {redefines subsettedFeature, abstract}
- redefiningFeature (): Feature [1] {redefines subsettingFeature, abstract}

7.4.2.1.35 ReferenceSubsetting_Init

Description

Initializes the properties of the SysML v2 element ReferenceSubsetting.

Generalizations

• Subsetting_Init (from KerMLInitializers)

Attributes

• to: ReferenceSubsetting [1]

Operations

• referencedFeature (): Feature [1] {redefines subsettedFeature, abstract}

7.4.2.1.36 Relationship_Init

Description

Initializes the properties of the SysML v2 element Relationship.

Generalizations

• Element Init (from KerMLInitializers)

Association Ends

• to : Relationship [1] (redefines: Element Init::to)

Operations

```
    ownedRelatedElement (): Element [0..*]
    Set { }
    source (): Element [0..*]
    Set { }
    target (): Element [0..*]
```

7.4.2.1.37 ReturnParameterMembership_Init

Description

Set{}

Initializes the properties of the SysML v2 element ReturnParameterMembership.

Generalizations

• ParameterMembership_Init (from KerMLInitializers)

Attributes

• to: ReturnParameterMembership [1]

Operations

• isComposite (in src : Element) : Boolean [1] returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

false

7.4.2.1.38 Specialization_Init

Description

Initializes the properties of the SysML v2 element Specialization.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to: Specialization [1]

Operations

- general (): Type [1] {redefines target, abstract}
- specific (): Type [1] {redefines source, abstract}

7.4.2.1.39 Step_Init

Description

Initializes the properties of the SysML v2 element Step.

Generalizations

• Feature Init (from KerMLInitializers)

Attributes

• to: Step [1]

7.4.2.1.40 Subclassification_Init

Description

Initializes the properties of the SysML v2 element Subclassification.

Generalizations

• Specialization_Init (from KerMLInitializers)

Attributes

• to: Subclassification [1]

Operations

- subclassifier () : Classifier [1]{abstract}
- superclassifier () : Classifier [1]{abstract}

7.4.2.1.41 Subsetting_Init

Description

Initializes the properties of the SysML v2 element Subsetting.

Generalizations

• Specialization_Init (from KerMLInitializers)

Attributes

• to : Subsetting [1]

Operations

• subsettedFeature () : Feature [1] {redefines general, abstract}

• subsettingFeature (): Feature [1] {redefines specific, abstract}

7.4.2.1.42 Succession_Init

Description

Initializes the properties of the SysML v2 element Succession.

Generalizations

• Connector_Init (from KerMLInitializers)

Attributes

• to: Succession [1]

7.4.2.1.43 SuccessionItemFlow_Init

Description

Initializes the properties of the SysML v2 element SuccessionItemFlow.

Generalizations

- ItemFlow_Init (from KerMLInitializers)
- Succession_Init (from KerMLInitializers)

Attributes

• to : SuccessionItemFlow [1]

7.4.2.1.44 TextualRepresentation_Init

Description

Initializes the properties of the SysML v2 element TextualRepresentation.

Generalizations

• AnnotatingElement Init (from KerMLInitializers)

Attributes

• to: TextualRepresentation [1]

Operations

- body () : String [1] {abstract}
- language () : String [1]{abstract}

7.4.2.1.45 Type_Init

Description

Initializes the properties of the SysML v2 element Type.

Generalizations

• Namespace_Init (from KerMLInitializers)

Attributes

```
• to: Type [1]
```

Operations

• isAbstract (): Boolean [1]

false

• isSufficient (): Boolean [1]

false

7.4.2.1.46 TypeFeaturing_Init

Description

Initializes the properties of the SysML v2 element TypeFeaturing.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to: TypeFeaturing [1]

Operations

- featureOfType (): Feature [1] {redefines source, abstract}
- featuringType (): Type [1] {redefines target, abstract}

7.4.2.2 System Initializers

7.4.2.2.1 ActionUsage_Init

Description

Initializes the properties of the SysML v2 element ActionUsage.

Generalizations

- Step_Init (from KerMLInitializers)
- Usage_Init (from SystemInitializers)

Attributes

• to : ActionUsage [1]

Operations

• isComposite (): Boolean [1] {redefines isComposite}

true

7.4.2.2.2 ActorMembership_Init

Description

Initializes the properties of the SysML v2 element ActorMembership.

Generalizations

• ParameterMembership_Init (from KerMLInitializers)

Attributes

• to : ActorMembership [1]

7.4.2.2.3 AssignmentActionUsage_Init

Description

Initializes the properties of the SysML v2 element AssignmentActionUsage.

Generalizations

• ActionUsage_Init (from SystemInitializers)

Attributes

• to : AssignmentActionUsage [1]

7.4.2.2.4 ConjugatedPortDefinition_Init

Description

Initializes the properties of the SysML v2 element ConjugatedPortDefinition.

Generalizations

• PortDefinition Init (from SystemInitializers)

Attributes

• to: ConjugatedPortDefinition [1]

7.4.2.2.5 ConjugatedPortTyping_Init

Description

Initializes the properties of the SysML v2 element ConjugatedPortTyping.

Generalizations

• FeatureTyping_Init (from KerMLInitializers)

Attributes

• to : ConjugatedPortTyping [1]

Operations

- conjugatedPortDefinition (): ConjugatedPortDefinition [1] {redefines type, abstract}
- portDefinition (): PortDefinition [1] {abstract}

7.4.2.2.6 ConnectionUsage_Init

Description

Initializes the properties of the SysML v2 element ConnectionUsage.

Generalizations

• PartUsage Init (from SystemInitializers)

Attributes

• to : ConnectionUsage [1]

7.4.2.2.7 ConstraintDefinition_Init

Description

Initializes the properties of the SysML v2 element ConstraintDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to: ConstraintDefinition [1]

7.4.2.2.8 ConstraintUsage_Init

Description

Initializes the properties of the SysML v2 element ConstraintUsage.

Generalizations

• Usage Init (from SystemInitializers)

Attributes

• to : ConstraintUsage [1]

7.4.2.2.9 Definition_Init

Description

Initializes the properties of the SysML v2 element Definition.

Generalizations

• Classifier Init (from KerMLInitializers)

Attributes

• to: Definition [1]

Operations

• isVariation (): Boolean [1]

false

7.4.2.2.10 EventOccurerenceUsage_Init

Description

Initializes the properties of the SysML v2 element EventOccurrenceUsage.

Generalizations

• OccurrenceUsage_Init (from SystemInitializers)

Attributes

• to: EventOccurrenceUsage [1]

7.4.2.2.11 FlowConnectionUsage_Init

Description

Initializes the properties of the SysML v2 element FlowConnectionUsage.

Generalizations

• ConnectionUsage Init (from SystemInitializers)

Association Ends

• to: FlowConnectionUsage [1] (redefines: ConnectionUsage Init::to)

7.4.2.2.12 ItemDefinition_Init

Description

Initializes the properties of the SysML v2 element ItemDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to: ItemDefinition [1]

7.4.2.2.13 ItemFeature_Init

Description

Initializes the properties of the SysML v2 element ItemFeature.

Generalizations

• Feature Init (from KerMLInitializers)

Association Ends

• to : ItemFeature [1] (redefines: Feature_Init::to)

7.4.2.2.14 MetadataUsage_Init

Description

Initializes the properties of the SysML v2 element MetadataUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to : MetadataUsage [1]

7.4.2.2.15 ObjectiveMembership_Init

Description

Initializes the properties of the SysML v2 element ObjectiveMembership.

Generalizations

• FeatureMembership Init (from KerMLInitializers)

Attributes

• to: ObjectiveMembership [1]

7.4.2.2.16 OccurenceDefinition_Init

Description

Initializes the properties of the SysML v2 element OccurrenceDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to : OccurrenceDefinition [1]

Operations

• isIndividual (): Boolean [1]

false

7.4.2.2.17 OccurrenceUsage_Init

Description

Initializes the properties of the SysML v2 element OccurrenceUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to: OccurrenceUsage [1]

Operations

• isIndividual (): Boolean [1]

false

• portionKind () : PortionKind [1]{abstract}

7.4.2.2.18 PartUsage_Init

Description

Initializes the properties of the SysML v2 element PartUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to: PartUsage [1]

7.4.2.2.19 PortConjugation_Init

Description

Initializes the properties of the SysML v2 element PortConjugation.

Generalizations

• Conjugation Init (from KerMLInitializers)

Attributes

• to: PortConjugation [1]

Operations

• originalPortDefinition (): PortDefinition [1] {redefines originalType, abstract}

7.4.2.2.20 PortDefinition_Init

Description

Initializes the properties of the SysML v2 element PortDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to: PortDefinition [1]

7.4.2.2.21 ReferenceUsage_Init

Description

Provides the basic features to map to a ReferenceUsage element.

Generalizations

• Usage Init (from SystemInitializers)

Attributes

• to : ReferenceUsage [1]

7.4.2.2.22 RequirementUsage_Init

Description

Initializes the properties of the SysML v2 element RequirementUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to: RequirementUsage [1]

7.4.2.2.3 StateUsage_Init

Description

Initializes the properties of the SysML v2 element StateUsage.

Generalizations

• ActionUsage Init (from SystemInitializers)

Attributes

• to: StateUsage [1]

7.4.2.2.24 SubjectMembership_Init

Description

Initializes the properties of the SysML v2 element SubjectMembership.

Generalizations

• ParameterMembership_Init (from KerMLInitializers)

Attributes

• to: SubjectMembership [1]

7.4.2.2.25 Usage_Init

Description

Initializes the properties of the SysML v2 element Usage.

Generalizations

• Feature Init (from KerMLInitializers)

Attributes

• to: Usage [1]

Operations

• isVariation (): Boolean [1]

false

7.5 Factories

7.5.1 Overview

The classes presented in this subclause specify facilities for creating elements in the target model form an arbitrary set of zero to many input parameters. After the target element is created, no link between it and an the value of inputs parameter (if any) will be preserved.

7.5.2 Mapping Specifications

7.5.2.1 LiteralString_Factory

Description

Factory class to create a LiteralString element.

Generalizations

- Expression Init (from KerMLInitializers)
- Factory (from Foundations)

Association Ends

```
 string : String [1] to : LiteralString [1]
(redefines: Expression Init::to)
```

Operations

```
• create (in string : String) : LiteralString [1]
```

• ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

Set{ReturnParameterFeatureMembership_Factory.create()}

7.5.2.2 StringParameterFeature_Factory

Description

Factory class to create a feature element representing a string.

Generalizations

- Factory (from Foundations)
- Feature Init (from KerMLInitializers)

Association Ends

• string: String[1]

Operations

```
• create (in string : String) : Feature [1]
```

• ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{StringParameterFeatureValue Factory.create(string)}
```

7.5.2.3 StringParameterFeatureValue_Factory

Description

Factory class to create a string feature value relationship for a feature element.

Generalizations

- Factory (from Foundations)
- FeatureValue Init (from KerMLInitializers)

Association Ends

• string : String [1]

Operations

```
create (in string : String) : FeatureValue [1]value () : Expression [1] {redefines value}
```

```
LiteralString Factory.create(string)
```

7.5.2.4 StringParameterMembership_Factory

Description

Factory class to create a parameter membership relationship for a feature element representing a string.

Generalizations

- Factory (from Foundations)
- ParameterMembership Init (from KerMLInitializers)

Association Ends

• string: String[1]

Operations

- create (in string : String) : ParameterMembership [1]
- ownedMemberParameter (): Feature [1] {redefines ownedMemberParameter}

```
StringParameterFeature Factory.create(string)
```

7.5.2.5 SubjectMembership_Factory

Description

Factory class to create a subject membership relationship for a given subject.

Generalizations

• Factory (from Foundations)

• SubjectMembership Init (from SystemInitializers)

Association Ends

• subject: Type [1]

Operations

- create (in subject : Type) : SubjectMembership [1]
- ownedMemberParameter (): Feature [1] {redefines ownedMemberParameter}

subject

7.5.2.6 AssignmentActionUsage_Factory

Description

Factory to create an assignment action usage.

Generalizations

- AssignmentActionUsage Init (from SystemInitializers)
- Factory (from Foundations)

Operations

- create (): AssignmentActionUsage [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{AssignmentActionUsageParameterMembership_Factory.create(),
DirectedReferenceUsageParameterMembership Factory.create(KerML::FeatureDirectionKind:: 'in')]
```

7.5.2.7 AssignmentActionUsageFeatureMembership2_Factory

Description

Factory class to create a feature membership relationship for a feature element created by the factory class AssignmentActionUsageTargetReferenceUsageIn2_Factory.

Generalizations

- Factory (from Foundations)
- FeatureMembership_Init (from KerMLInitializers)

Operations

- create (): FeatureMembership [1]
- ownedMemberFeature (): Feature [1] {redefines ownedMemberFeature}

AssignmentActionUsageTargetReferenceUsageIn2 Factory.create()

7.5.2.8 AssignmentActionUsageFeatureMembership3_Factory

Description

Factory class to create a feature membership relationship for a feature element created by the factory class AssignmentActionUsageTargetReferenceUsageIn3 Factory.

Generalizations

- Factory (from Foundations)
- FeatureMembership_Init (from KerMLInitializers)

Operations

- create () : FeatureMembership [1]
- ownedMemberFeature (): Feature [1] {redefines ownedMemberFeature}

AssignmentActionUsageTargetReferenceUsageIn3 Factory.create()

7.5.2.9 AssignmentActionUsageOwningMembership_Factory

Description

Factory class to create a owning membership relationship for an element created by the factory class AssignmentActionUsage_Factory.

Generalizations

- Factory (from Foundations)
- OwningMembership Init (from KerMLInitializers)

Operations

- create (): OwningMembership [1]
- ownedMemberElement () : Element [1] {redefines ownedMemberElement}

AssignmentActionUsage Factory.create()

7.5.2.10 AssignmentActionUsageParameterMembership_Factory

Description

Factory class to create a parameter membership relationship for a feature element created by the factory class AssignmentActionUsageReferenceUsageIn1_Factory.

Generalizations

- Factory (from Foundations)
- ParameterMembership Init (from KerMLInitializers)

Operations

• create () : ParameterMembership [1]

• ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
AssignmentActionUsageReferenceUsageIn1_Factory.create()
```

7.5.2.11 AssignmentActionUsageReferenceUsageIn1_Factory

Description

Factory class creating a reference usage element with direction "in" as parameter of an assignment action usage.

Generalizations

- Factory (from Foundations)
- ReferenceUsage Init (from SystemInitializers)

Operations

```
• create () : ReferenceUsage [1]
```

• direction (): Feature Direction Kind [0..1] {redefines direction}

```
KerML::FeatureDirectionKind::_'in'
```

• ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{AssignmentActionUsageFeatureMembership2 Factory.create()}
```

7.5.2.12 AssignmentActionUsageTargetReferenceUsageIn2 Factory

Description

Factory class creating a reference usage element as an owned feature of the reference usage of an assignment action usage.

Generalizations

- Factory (from Foundations)
- ReferenceUsage Init (from SystemInitializers)

Operations

- create (): ReferenceUsage [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{AssignmentActionUsageFeatureMembership3 Factory.create()}
```

7.5.2.13 AssignmentActionUsageTargetReferenceUsageIn3_Factory

Description

Factory class creating a reference usage element as an owned feature of the reference usage of an assignment action usage.

Generalizations

- Factory (from Foundations)
- ReferenceUsage Init (from SystemInitializers)

Operations

• create (): ReferenceUsage [1]

7.5.2.14 DirectedReferenceUsage_Factory

Description

Factory class creating a reference usage element with a given direction and without owned relationships.

Generalizations

- Factory (from Foundations)
- ReferenceUsage Init (from SystemInitializers)

Association Ends

• featureDirectionKind : FeatureDirectionKind [1]

Operations

- create (in featureDirectionKind : FeatureDirectionKind) : ReferenceUsage [1]
- direction (): Feature Direction Kind [0..1] {redefines direction}

featureDirectionKind

7.5.2.15 DirectedReferenceUsageParameterMembership_Factory

Description

Factory class to create a parameter membership relationship for a feature element created by the factory class DirectedReferenceUsage Factory.

Generalizations

- Factory (from Foundations)
- ParameterMembership_Init (from KerMLInitializers)

Association Ends

• featureDirectionKind : FeatureDirectionKind [1]

Operations

- create (in featureDirectionKind : FeatureDirectionKind) : ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

 ${\tt DirectedReferenceUsage_Factory.create(featureDirectionKind)}$

7.5.2.16 EmptyObjectiveMembership_Factory

Description

Factory class to create an objective membership without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- ObjectiveMembership Init (from SystemInitializers)

Operations

- create (): ObjectiveMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
EmptyRequirementUsage Factory.create()
```

7.5.2.17 EmptyRequirementUsage_Factory

Description

Factory class to create a requirement usage without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- RequirementUsage Init (from SystemInitializers)

Operations

- create (): RequirementUsage [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{
EmptySubjectMembership_Factory.create(),
ReturnParameterFeatureMembership Factory.create()}
```

7.5.2.18 EmptySubject_Factory

Description

Factory class to create a reference usage representing a subject without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- ReferenceUsage Init (from SystemInitializers)

Operations

56

- create (): ReferenceUsage [1]
- direction (): FeatureDirectionKind [0..1] {redefines direction}

```
KerML::FeatureDirectionKind:: 'in'
```

7.5.2.19 EmptySubjectMembership_Factory

Description

Factory class to create a memberhsip relationship for a reference usage representing a subject without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- SubjectMembership Init (from SystemInitializers)

Operations

- create (): SubjectMembership [1]
- ownedMemberParameter (): Feature [1] {redefines ownedMemberParameter}

```
EmptySubject_Factory.create()
```

7.5.2.20 FeatureTyping_Factory

Description

Factory class to create a Feature Typing relationship. The create parameter is set as the type.

Generalizations

- Factory (from Foundations)
- FeatureTyping Init (from KerMLInitializers)

Association Ends

• type : NamedElement [1]

Operations

- create (in type : NamedElement) : FeatureTyping [1]
- type (): Type [1] {redefines type}

type

7.5.2.21 FlowConnectionUsage_Factory

Description

Factory class to create a FlowConnectionUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector. The factory class only supports UML4SysML::InformationFlows which have exactly one source and one target element, which is implicitly assured since connectors in SysML may only ever have two ends.

Generalizations

- Factory (from Foundations)
- FlowConnectionUsage Init (from SystemInitializers)

Association Ends

• informationFlow : InformationFlow [1]

Operations

- create (in informationFlow : InformationFlow) : FlowConnectionUsage [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
let relationships : Set(KerML::Relationship) =
   informationFlow.realizingConnector->collect(c|Subsetting Factory.create(c))
   ->including (FeatureTyping Factory.create(informationFlow))
   ->including(FlowEndParameterMembership Factory.create(
                informationFlow,informationFlow.source.get(0)))
   ->including(FlowEndParameterMembership Factory.create(
                informationFlow,informationFlow.target.get(0))) in
let itemProperty : UML::Property =
   if Helper.hasStereotypeApplied(informationFlow, 'SysML::Ports&Flows::ItemFlow') then
       Helper.getTagValueAsElement(informationFlow, 'SysML::Ports&Flows::ItemFlow', 'itemPro
   else
        invalid
   endif in
if itemProperty.oclIsUndefined() then
   relationships->union(informationFlow.conveyed->flatten()
        ->collect(i | FlowItemFeatureMembership Factory.create(i)))
else
   relationships->including(
       FlowItemFeatureMembership Factory.create(itemProperty))
endif
```

7.5.2.22 FlowConnectionUsageFeatureMembership_Factory

Description

Factory class to create a FeatureMembership relationship for a FlowConnectionUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector.

Generalizations

- Factory (from Foundations)
- FeatureMembership_Init (from KerMLInitializers)

Association Ends

• informationFlow : InformationFlow [1]

Operations

• create (in informationFlow : InformationFlow) : FeatureMembership [1]

• ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
FlowConnectionUsage Factory.create(informationFlow)
```

7.5.2.23 FlowEndParameterMembership_Factory

Description

Factory class to create a ParameterMembership relationship for an end of a FlowConnectionUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector.

Generalizations

- Factory (from Foundations)
- ParameterMembership Init (from KerMLInitializers)

Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

Operations

- create (in informationFlow: InformationFlow, in end: NamedElement): ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

InformationFlowEventOccurrenceUsage Factory.create(informationFlow, end)

7.5.2.24 FlowItem_Factory

Description

Factory class to create a ItemFeature element as a target element for the flowing entity specified by an UML4SysML::InformationFlow.

Generalizations

- Factory (from Foundations)
- ItemFeature_Init (from SystemInitializers)

Association Ends

• item : NamedElement [1]

Operations

- create (in item : NamedElement) : ItemFeature [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
if item.oclIsKindOf(UML::Classifier) then
    Set{FeatureTyping_Factory.create(item)}
else if item.oclIsKindOf(UML::Property) then
```

```
Set{ReferenceSubsetting_Factory.create(item)}
else
    Set{}
endif
endif
```

7.5.2.25 FlowItemFeatureMembership_Factory

Description

Factory class to create a FeatureMembership relationship for an ItemFeature as a target element for the flowing entity specified by an UML4SysML::InformationFlow.

Generalizations

- Factory (from Foundations)
- FeatureMembership Init (from KerMLInitializers)

Association Ends

• item : NamedElement [1]

Operations

- create (in item : NamedElement) : FeatureMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
FlowItem_Factory.create(item)
```

7.5.2.26 InformationFlowEventOccurrenceUsage_Factory

Description

Generalizations

- EventOccurerenceUsage Init (from SystemInitializers)
- Factory (from Foundations)

Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

Operations

- create (in informationFlow : InformationFlow, in end : NamedElement) : EventOccurrenceUsage [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

```
Set{InformationFlowReferenceSubsetting Factory.create(informationFlow, end)}
```

7.5.2.27 InformationFlowReferenceSubsetting_Factory

Description

60

Factory class to create a ReferenceSubsetting relationship for an end of a FlowConnectionUsage subsetting the target element of an end element of an UML4SysML::InformationFlow.

Generalizations

- Factory (from Foundations)
- ReferenceSubsetting_Init (from KerMLInitializers)

Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

Operations

- create (in informationFlow: InformationFlow, in end: NamedElement): ReferenceSubsetting [1]
- referencedFeature () : Feature [1] {redefines referencedFeature}

InformationFlowEnd Mapping.getMapped(informationFlow, end)

7.5.2.28 LiteralBoolean_Factory

Description

Factory class to create a LiteralBoolean element.

Generalizations

- Expression Init (from KerMLInitializers)
- Factory (from Foundations)

Association Ends

boolean: Boolean [1]to: LiteralBoolean [1] (redefines: Expression Init::to)

Operations

- create (in boolean : Boolean) : LiteralBoolean [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

Set{ReturnParameterFeatureMembership Factory.create()}

7.5.2.29 LiteralNull_Factory

Description

Factory class to create a LiteralNull element.

Generalizations

• Expression_Init (from KerMLInitializers)

• Factory (from Foundations)

Association Ends

• to: NullExpression [1] (redefines: Expression_Init::to)

Operations

- create (): NullExpression [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

Set{ReturnParameterFeatureMembership Factory.create()}

7.5.2.30 LiteralRational_Factory

Description

Factory class to create a LiteralRational element.

Generalizations

- Expression_Init (from KerMLInitializers)
- Factory (from Foundations)

Association Ends

- real : Real [1]
- to : LiteralRational [1] (redefines: Expression_Init::to)

Operations

- create (in real : Real) : LiteralReal [1]
- ownedRelationship (): Relationship [0..*] {redefines ownedRelationship}

Set{ReturnParameterFeatureMembership_Factory.create()}

7.5.2.31 ObjectFlowItemFlowEndRedefinition_Factory

Description

Generalizations

- Factory (from Foundations)
- Redefinition Init (from KerMLInitializers)

Association Ends

• feature : Feature [1]

Operations

- create (in feature : Feature) : Redefinition [1]
- redefinedFeature (): Feature [1] {redefines redefinedFeature}

feature

7.5.2.32 ReferenceSubsetting_Factory

Description

Factory class to create a ReferenceSubseeting relationship. The create parameter is set as the referenced feature.

Generalizations

- Factory (from Foundations)
- ReferenceSubsetting_Init (from KerMLInitializers)

Association Ends

• property : Property [1]

Operations

- create (in property : Property) : ReferenceSubsetting [1]
- referencedFeature (): Feature [1] {redefines referencedFeature}

property

7.5.2.33 ReturnParameterFeature_Factory

Description

Factory class to create a feature element with direction 'out' representing a return parameter.

Generalizations

- Factory (from Foundations)
- Feature_Init (from KerMLInitializers)

Operations

- create (): Feature [1]
- direction (): Feature Direction Kind [0..1] {redefines direction}

KerML::FeatureDirectionKind:: 'out'

7.5.2.34 ReturnParameterFeatureMembership_Factory

Description

Factory class to create a feature membership relationship for a feature element with direction 'out' representing a return parameter.

Generalizations

- Factory (from Foundations)
- ReturnParameterMembership_Init (from KerMLInitializers)

Operations

- create (): ReturnParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
ReturnParameterFeature Factory.create()
```

7.5.2.35 Subsetting_Factory

Description

Factory class to create a Subsetting relationship. The create parameter is set as the subsetted feature.

Generalizations

- Factory (from Foundations)
- Subsetting Init (from KerMLInitializers)

Association Ends

• subsetted : NamedElement [1]

Operations

- create (in subsetted : NamedElement) : Subsetting [1]
- subsettedFeature () : Feature [1] {redefines subsettedFeature}

subsetted

7.6 Generic Mappings

7.6.1 Overview

Generic mappings are partial definitions of transformation rules that are intended to factorize reusable algorithms for making the global specification more compact and easier to read and maintain. Basically, they provide a default value for all the non-derived attributes of their target metaclass wherever possible, or declare an abstract operation for them otherwise. They are similar to initializers, except that they have a source element defined. The operations provided by the generic mappings can be redefined by their specialization, as appropriate according to the source type specified by the redefinition of their from attribute.

All of these generic mappings are abstract.

7.6.2 Common Mappings

7.6.2.1 CommonFeatureReferenceExpression_Mapping

Description

Common mapping class for a feature reference expression.

7.6.2.18 CommonReferenceUsageInUntyped_Mapping

Description

Common mapping class that creates an untyped reference usage element with direction 'in'.

General Mappings

GenericToReferenceUsage_Mapping

Mapping Source

TypedElement

Mapping Target

ReferenceUsage

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• ReferenceUsage::direction () : FeatureDirectionKind [0..1]
```

```
KerML::FeatureDirectionKind::_'in'
```

• ReferenceUsage::declaredName (): String [0..1]

from.name

7.6.3 Generic Mappings To KerML

7.6.3.1 GenericToAnnotatingElement_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Annotating Element.

General Mappings

GenericToElement_Mapping

Mapping Source

Element

Mapping Target

AnnotatingElement

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• AnnotatingElement::annotation (): Annotation [0..*]

Set{}

7.6.3.2 GenericToAnnotation_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Annotation.

General Mappings

GenericToRelationship_Mapping

Mapping Source

Element

Mapping Target

Annotation

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Annotation::annotatedElement (): Element [1] abstract rule
- Annotation::owningAnnotatedElement () : Element [0..1]

null

• Annotation::annotatingElement () : AnnotatingElement [1] abstract rule

7.6.3.3 GenericToAssociation_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Association.

General Mappings

GenericToRelationship_Mapping GenericToClassifier_Mapping

Mapping Source

Element

Mapping Target

Association

Owned Mappings

(none)

7.6.3.4 GenericToBehavior_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Behavior.

General Mappings

GenericToClassifier_Mapping

Mapping Source

Element

Mapping Target

Behavior

Owned Mappings

(none)

7.6.3.5 GenericToClassifier_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Classifier.

General Mappings

GenericToType_Mapping

Mapping Source

Element

Mapping Target

Classifier

Owned Mappings

(none)

7.6.3.6 GenericToComment_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Comment.

General Mappings

GenericToAnnotatingElement_Mapping

Mapping Source

Element **Mapping Target** Comment **Owned Mappings** (none) **Applicable filters** (none) Mapping rules In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties. • Comment::locale (): String [1] null • Comment::body (): String [1] abstract rule 7.6.3.7 GenericToConjugation_Mapping **Description** Generic mapping class for mappings to the SysML v2 element Conjugation. **General Mappings** GenericToRelationship_Mapping **Mapping Source** Element **Mapping Target** Conjugation **Owned Mappings** (none) **Applicable filters** (none) Mapping rules

80

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Conjugation::conjugatedType (): Type [1] abstract rule
- Conjugation::originalType (): Type [1] abstract rule

7.6.3.8 GenericToConnector_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Connector.

General Mappings

GenericToFeature_Mapping
GenericToRelationship Mapping

Mapping Source

Element

Mapping Target

Connector

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• Connector::isDirected (): Boolean [1]

false

7.6.3.9 GenericToDocumentation_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *Documentation*.

General Mappings

GenericToComment Mapping

Mapping Source

Element

Mapping Target

Documentation

Owned Mappings

(none)

7.6.3.10 GenericToElement_Mapping

Description

This is the general abstract class to be used as an ancestor for any class mapping specification.

General Mappings

Mapping

Mapping Source

Element

Mapping Target

Element

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• Element::ownedRelationship (): Relationship [0..*]
```

```
Set{}
```

• Element::aliasId (): String [0..*]

```
Set{}
```

• Element::shortName (): String [0..1]

```
null
```

• Element::declaredName (): String [0..1]

```
null
```

• Element::elementId(): String[1] Helper.createUUID() 7.6.3.11 GenericToEndFeatureMembership_Mapping **Description** Generic mapping class for mappings to the SysML v2 element EndFeatureMembership. **General Mappings** GenericToFeatureMembership Mapping **Mapping Source** Element **Mapping Target** EndFeatureMembership **Owned Mappings** (none) 7.6.3.12 GenericToExpression_Mapping **Description** Generic mapping class for mappings to the SysML v2 element Expression. **General Mappings** GenericToStep_Mapping **Mapping Source** Element **Mapping Target** Expression **Owned Mappings**

7.6.3.13 GenericToFeature_Mapping

Description

(none)

Generic mapping class for mappings to the SysML v2 element Feature.

General Mappings

```
GenericToType_Mapping
```

Element

Mapping Target

Mapping Source

Feature

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• Feature::isComposite (): Boolean [1] false
```

• Feature::isOrdered () : Boolean [1]

false

• Feature::isEnd () : Boolean [1]

false

• Feature::isReadOnly (): Boolean [1]

false

• Feature::direction (): FeatureDirectionKind [0..1]

null

• Feature::isDerived (): Boolean [1]

false

• Feature::isPortion (): Boolean [1]

false

• Feature::isUnique (): Boolean [1]

true

7.6.3.14 GenericToFeatureChainExpression_Mapping

Description

Generic mapping class for mappings to the SysML v2 element FeatureChainExpression.
General Mappings
GenericToOperatorExpression_Mapping
Mapping Source
Element
Mapping Target
FeatureChainExpression
Owned Mappings
(none)
7.6.3.15 GenericToFeatureChaining_Mapping
Description
Generic mapping class for mappings to the SysML v2 element FeatureChaining.
General Mappings
GenericToRelationship_Mapping
Mapping Source
Element
Mapping Target
FeatureChaining
Owned Mappings
(none)
Applicable filters
(none)
Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.
• FeatureChaining::chainingFeature (): Feature [1] abstract rule
7.6.3.16 GenericToFeatureMembership_Mapping

Description

Generic mapping class for mappings to the SysML v2 element FeatureMembership.

General Mappings

GenericToOwningMembership_Mapping GenericToTypeFeaturing_Mapping

Mapping Source

Element

Mapping Target

FeatureMembership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- FeatureMembership::ownedMemberFeature (): Feature [1] abstract rule
- FeatureMembership::ownedRelatedElement () : Element [0..*]

```
Set{self.ownedMemberFeature()}
```

7.6.3.17 GenericToFeatureReferenceExpression_Mapping

Description

Generic mapping class for mappings to the SysML v2 element FeatureReferenceExpression.

General Mappings

GenericToExpression_Mapping

Mapping Source

Element

Mapping Target

FeatureReferenceExpression

Owned Mappings

(none)

7.6.3.18 GenericToFeatureTyping_Mapping

Description

Generic mapping class for mappings to the SysML v2 element FeatureTyping.

General Mappings

GenericToSpecialization_Mapping

Mapping Source

Element

Mapping Target

FeatureTyping

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- FeatureTyping::typedFeature () : Feature [1] abstract rule
- FeatureTyping::type (): Type [1] abstract rule

7.6.3.19 GenericToFeatureValue_Mapping

Description

Generic mapping class for mappings to the SysML v2 element FeatureValue.

General Mappings

GenericToOwningMembership_Mapping

Mapping Source

Element

Mapping Target

FeatureValue

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• FeatureValue::featureWithValue (): Feature [1] 
abstract rule
```

- FeatureValue::value (): Expression [1] abstract rule
- FeatureValue::isDefault (): Boolean [1]

false

• FeatureValue::ownedRelatedElement () : Element [0..*]

```
Set{self.value()}
```

• FeatureValue::isInitial (): Boolean [1]

false

7.6.3.20 GenericToFunction_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Function.

General Mappings

GenericToBehavior_Mapping

Mapping Source

Element

Mapping Target

Function

Owned Mappings

(none)

7.6.3.21 GenericToImport_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Import.

General Mappings

GenericToRelationship_Mapping

Mapping Source

Element

Mapping Target

Import

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• Import::isImportAll () : Boolean [1]
```

false

• Import::isRecursive (): Boolean [1]

false

• Import::importedMemberName (): String [0..1]

null

• Import::visibility (): VisibilityKind [1]

```
KerML::VisibilityKind::public
```

7.6.3.22 GenericToInvocationExpression_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *InvocationExpression*.

General Mappings

GenericToExpression_Mapping

Mapping Source

Element

Mapping Target

InvocationExpression

Owned Mappings
(none)
7.6.3.23 GenericToInteraction_Mapping
Description
Generic mapping class for mappings to the SysML v2 element <i>Interaction</i> .
General Mappings
GenericToBehavior_Mapping GenericToAssociation_Mapping
Mapping Source
Element
Mapping Target
Interaction
Owned Mappings
(none)
7.6.3.24 GenericToltemFlow_Mapping
Description
Generic mapping class for mappings to the SysML v2 element <i>ItemFlow</i> .
General Mappings
GenericToConnector_Mapping
Mapping Source
Element
Mapping Target
ItemFlow
Owned Mappings
(none)
7.6.3.25 GenericToMembership_Mapping
Description
Generic mapping class for mappings to the SysML v2 element Membership.
General Mappings

GenericToRelationship Mapping

Mapping Source

Element

Mapping Target

Membership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• Membership::memberShortName (): String [0..1]

```
null
```

- Membership::membershipOwningNamespace (): Element [0..*] abstract rule
- Membership::visibility (): VisibilityKind [1]

```
KerML::VisibilityKind::public
```

- Membership::memberElement (): Element [1]
 abstract rule
- Membership::memberName (): String [0..1]

null

7.6.3.26 GenericToMembershipImport_Mapping

Description

Generic mapping class for mappings to the SysML v2 element MembershipImport.

General Mappings

GenericToImport Mapping

Mapping Source

Element

Mapping Target

MembershipImport

Owned Mappings
(none)
Applicable filters
(none)
Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.
 MembershipImport::importedMembership (): Namespace [1] abstract rule
7.6.3.27 GenericToNamespace_Mapping
Description
Generic mapping class for mappings to the SysML v2 element <i>Namespace</i> .
General Mappings
GenericToElement_Mapping
Mapping Source
Element
Mapping Target
Namespace
Owned Mappings
(none)
7.6.3.28 GenericToNamespaceImport_Mapping
Description
Generic mapping class for mappings to the SysML v2 element NamespaceImport.
General Mappings
GenericToImport_Mapping
Mapping Source
Element
Mapping Target
NamespaceImport

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• NamespaceImport::importedNamespace (): Namespace [1] abstract rule

7.6.3.29 GenericToOperatorExpression_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *OperatorExpression*.

General Mappings

GenericToExpression_Mapping

Mapping Source

Element

Mapping Target

OperatorExpression

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• OperatorExpression::operator () : String [1] abstract rule

7.6.3.30 GenericToOwningMembership_Mapping

Description

Generic mapping class for mappings to the SysML v2 element OwningMembership.

General Mappings

GenericToMembership_Mapping

Mapping Source

Element

Mapping Target

OwningMembership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- OwningMembership::ownedMemberElement (): Element [1] abstract rule
- OwningMembership::ownedRelatedElement (): Element [0..*]

```
Set{self.ownedMemberElement()}
```

7.6.3.31 GenericToPackage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *Package*.

General Mappings

GenericToNamespace_Mapping

Mapping Source

Element

Mapping Target

Package

Owned Mappings

(none)

7.6.3.32 GenericToParameterMembership_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *ParameterMembership*. **General Mappings** GenericToFeatureMembership_Mapping **Mapping Source** Element **Mapping Target** ParameterMembership **Owned Mappings** (none) **Applicable filters** (none) Mapping rules In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties. • ParameterMembership::ownedRelatedElement () : Element [0..*] Set{self.ownedMemberParameter()} • ParameterMembership::ownedMemberParameter (): Feature [1] null 7.6.3.33 GenericToPredicate_Mapping **Description** Generic mapping class for mappings to the SysML v2 element *Predicate*. **General Mappings** GenericToFunction_Mapping **Mapping Source** Element **Mapping Target** Predicate **Owned Mappings**

(none)

7.6.3.34 GenericToRedefinition_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Redefinition.

General Mappings

GenericToSubsetting_Mapping

Mapping Source

Element

Mapping Target

Redefinition

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Redefinition::redefiningFeature (): Feature [1] abstract rule
- Redefinition::redefinedFeature (): Feature [1] abstract rule

7.6.3.35 GenericToReferenceSubsetting_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ReferenceSubsetting.

General Mappings

GenericToSubsetting_Mapping

Mapping Source

Element

Mapping Target

ReferenceSubsetting

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• ReferenceSubsetting::referencedFeature (): Feature [1] abstract rule

7.6.3.36 GenericToRelationship_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *Relationship*.

General Mappings

GenericToElement Mapping

Mapping Source

Element

Mapping Target

Relationship

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
Relationship::target () : Element [0..*]Set { }
```

• Relationship::ownedRelatedElement (): Element [0..*]

```
Set{}
```

• Relationship::source () : Element [0..*]

```
Set{}
```

7.6.3.37 GenericToReturnParameterMembership_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ReturnParameterMembership.

General Mappings

GenericToParameterMembership_Mapping

Mapping Source

Element

Mapping Target

ReturnParameterMembership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• ReturnParameterMembership::isComposite (in src : Element) : Boolean [1]

returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

false

7.6.3.38 GenericToSpecialization_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Specialization.

General Mappings

GenericToRelationship_Mapping

Mapping Source

Element

Mapping Target

Specialization

Owned Mappings (none) **Applicable filters** (none) Mapping rules In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties. • Specialization::general (): Type [1] abstract rule • Specialization::specific (): Type [1] abstract rule 7.6.3.39 GenericToStep_Mapping **Description** Generic mapping class for mappings to the SysML v2 element Step. **General Mappings** GenericToFeature_Mapping **Mapping Source** Element **Mapping Target** Step **Owned Mappings** (none) 7.6.3.40 GenericToSubclassification_Mapping **Description** Generic mapping class for mappings to the SysML v2 element Subclassification.

General Mappings

GenericToSpecialization Mapping

Mapping Source

Element

Mapping Target

Subclassification

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• Subclassification::subclassifier () : Classifier [1]

null

• Subclassification::superclassifier (): Classifier [1]

null

7.6.3.41 GenericToSubsetting_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Subsetting.

General Mappings

GenericToSpecialization_Mapping

Mapping Source

Element

Mapping Target

Subsetting

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• Subsetting::ownedRelatedElement () : Element [0..*]

```
Set{}
```

- Subsetting::subsettedFeature () : Feature [1] abstract rule
- Subsetting::subsettingFeature (): Feature [1]

from

7.6.3.42 GenericToSuccession_Mapping

Description

Generic mapping class for mappings to the SysML v2 element Succession.

General Mappings

GenericToConnector_Mapping

Mapping Source

Element

Mapping Target

Succession

Owned Mappings

(none)

7.6.3.43 GenericToSuccessionItemFlow_Mapping

Description

Generic mapping class for mappings to the SysML v2 element SuccessionItemFlow.

General Mappings

GenericToSuccession_Mapping GenericToItemFlow_Mapping

Mapping Source

Element

Mapping Target

SuccessionItemFlow

Owned Mappings

(none)

7.6.3.44 GenericToTextualRepresentation_Mapping

Description

Generic mapping class for mappings to the SysML v2 element TextualRepresentation.
General Mappings
GenericToAnnotatingElement_Mapping
Mapping Source

        abstract rule
    TypeFeaturing::featureOfType (): Feature [1]
        abstract rule
```

7.6.4 Generic Mappings to Systems

7.6.4.1 GenericToActionUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ActionUsage. **General Mappings** GenericToUsage_Mapping GenericToStep_Mapping **Mapping Source** Element **Mapping Target** ActionUsage **Owned Mappings** (none) **Applicable filters** (none) Mapping rules In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties. • ActionUsage::isComposite (): Boolean [1] true 7.6.4.2 GenericToActorMembership_Mapping **Description** Generic mapping class for mappings to the SysML v2 element *ActorMembership*. **General Mappings** GenericToParameterMembership_Mapping **Mapping Source** Element **Mapping Target** ActorMembership **Owned Mappings** (none)

7.6.4.3 GenericToAssignmentActionUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element AssignmentActionUsage.

General Mappings

GenericToActionUsage_Mapping

Mapping Source

Element

Mapping Target

AssignmentActionUsage

Owned Mappings

(none)

7.6.4.4 GenericToConnectionUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ConnectionUsage.

General Mappings

GenericToPartUsage_Mapping

Mapping Source

Element

Mapping Target

ConnectionUsage

Owned Mappings

(none)

7.6.4.5 GenericToConjugatedPortDefinition_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ConjugatedPortDefinition.

General Mappings

GenericToPortDefinition_Mapping

Mapping Source

Element

Mapping Target

ConjugatedPortDefinition

Owned Mappings

(none)

7.6.4.6 GenericToConjugatedPortTyping_Mapping

Description

Generic mapping class for mappings to the SysML v2 element ConjugatedPortTyping.

General Mappings

GenericToFeatureTyping Mapping

Mapping Source

Element

Mapping Target

ConjugatedPortTyping

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ConjugatedPortTyping::conjugatedPortDefinition () : ConjugatedPortDefinition [1] abstract rule
- ConjugatedPortTyping::portDefinition (): PortDefinition [1] abstract rule

7.6.4.7 GenericToConstraintDefinition_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *ConstraintDefinition*.

General Mappings

GenericToDefinition Mapping

Mapping Source
Element
Mapping Target
ConstraintDefinition
Owned Mappings
(none)
7.6.4.8 GenericToConstraintUsage_Mapping
Description
Generic mapping class for mappings to the SysML v2 element ConstraintUsage.
General Mappings
GenericToUsage_Mapping
Mapping Source
Element
Mapping Target
ConstraintUsage
Owned Mappings

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• Definition::isVariation(): Boolean[1]

false

7.6.4.10 GenericToEventOccurerenceUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element EventOccurrenceUsage.

General Mappings

GenericToOccurrenceUsage Mapping

Mapping Source

Element

Mapping Target

EventOccurrenceUsage

Owned Mappings

(none)

7.6.4.11 GenericToltemDefinition_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *ItemDefinition*.

General Mappings

GenericToDefinition Mapping

Mapping Source

Element

Mapping Target

ItemDefinition

Owned Mappings

(none)

7.6.4.12 GenericToltemUsage

Description

Generic mapping class for mappings to the SysML v2 element ItemUsage.

General Mappings

GenericToOccurrenceUsage_Mapping

Mapping Source

Element

Mapping Target

ItemUsage

Owned Mappings

(none)

7.6.4.13 GenericToMetadataUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element MetadataUsage.

General Mappings

GenericToUsage_Mapping

Mapping Source

Element

Mapping Target

MetadataUsage

Owned Mappings

(none)

7.6.4.14 GenericToObjectiveMembership_Mapping

Description

Generic mapping class for mappings to the SysML v2 element *ObjectiveMembership*.

General Mappings

GenericToFeatureMembership_Mapping

Mapping Source

Element

Mapping Target

ObjectiveMembership

Owned Mappings

(none)

7.6.4.15 GenericToOccurenceDefinition_Mapping

Description

Generic mapping class for mappings to the SysML v2 element OccurrenceDefinition.

General Mappings

GenericToDefinition_Mapping

Mapping Source

Element

Mapping Target

OccurrenceDefinition

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• OccurrenceDefinition::isIndividual (): Boolean [1]

false

7.6.4.16 GenericToOccurrenceUsage_Mapping

Description

Generic mapping class for mappings to the SysML v2 element OccurrenceUsage.

General Mappings

GenericToUsage Mapping

Mapping Source

Element

Mapping Target

OccurrenceUsage

Owned Mappings

(none)

Applicable filters

(none)

false

7.7 Mappings from UML4SysML metaclasses

7.7.1 Overview

UML4SysML is the subset of UML containing all model elements that are reused by SysML. The complete list of model elements is defined in [SysMLv1], subclause 4.1.

7.7.2 Actions

This chapter lists all mapping specifications of UML4SysML::Actions model elements.

7.7.2.1 Overview

Table 1. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AcceptCallAction	AcceptActionUsage
AcceptEventAction	AcceptActionUsage
ActionInputPin	ReferenceUsage
AddStructuralFeatureValueAction	ActionUsage
AddVariableValueAction	ActionUsage
BroadcastSignalAction	ActionUsage
CallBehaviorAction	ActionUsage
CallOperationAction	ActionUsage
Clause	not mapped; see next section

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
ClearAssociationAction	ActionUsage
ClearStructuralFeatureAction	ActionUsage
ClearVariableAction	ActionUsage
ConditionalNode	not mapped; see next section
CreateLinkAction	ActionUsage
CreateLinkObjectAction	ActionUsage
CreateObjectAction	ActionUsage
DestroyLinkAction	ActionUsage
DestroyObjectAction	ActionUsage
InputPin	not mapped; see next section
LinkEndCreationData	not mapped; see next section
LinkEndData	not mapped; see next section
LinkEndDestructionData	not mapped; see next section
LoopNode	ActionUsage
OpaqueAction	ActionUsage
OutputPin	ReferenceUsage
RaiseExceptionAction	ActionUsage
ReadExtentAction	ActionUsage
ReadIsClassifiedObjectAction	ActionUsage
ReadLinkAction	ActionUsage
ReadLinkObjectEndAction	ActionUsage
ReadSelfAction	ActionUsage
ReadStructuralFeatureAction	ActionUsage
ReadVariableAction	ActionUsage
ReclassifyObjectAction	ActionUsage
ReduceAction	ActionUsage
RemoveStructuralFeatureValueAction	ActionUsage
RemoveVariableValueAction	ActionUsage
ReplyAction	ActionUsage
SendObjectAction	ActionUsage
SendSignalAction	ActionUsage
SequenceNode	ActionUsage
StartClassifierBehaviorAction	ActionUsage

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
StartObjectBehaviorAction	ActionUsage
StructuredActivityNode	ActionUsage
TestIdentityAction	CalculationUsage
UnmarshallAction	ActionUsage
ValuePin	ReferenceUsage
ValueSpecificationAction	ActionUsage

The following table gives an overview of which SysML v2 elements the UML4SysML::Actions elements are transformed with which mapping class. The mapping details are in 7.7.2.3.

The justifications for the elements without mapping are given in 7.7.2.2.

7.7.2.2 UML4SysML::Actions elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 2. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
AcceptCallAction	Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
ActionInputPin	The UML4SysML::ActionInputPin concept is not covered by SysML v2. The model element is mapped as a input or output pin, but without the special action input pin semantics.
Clause	Mapping is not specified yet.
ConditionalNode	Mapping is not specified yet.
LinkEndCreationData	Mapping is not specified yet.
LinkEndData	Mapping is not specified yet.
LinkEndDestructionData	Mapping is not specified yet.
ReclassifyObjectAction	The UML4SysML::ReclassifyObjectAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
ReplyAction	The UML4SysML::ReplyAction is only used with UML4SysML::AcceptCallAction. Since we have no mapping of AcceptCallAction to SysML v2, there is also no mapping for ReplyAction. However, it is mapped to an empty action usage to keep the connections within the activity respectively action definition.

SysML v1 Concept	Rationale
StartClassifierBehaviorAction	The UML4SysML::StartClassifierBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
StartObjectBehaviorAction	The UML4SysML::StartObjectBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
UnmarshallAction	Mapping is not specified yet.

7.7.2.3 Mapping Specifications

7.7.2.3.1 Accept Event Actions

7.7.2.3.1.1 AcceptCallAction_Mapping

Description

Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.

General Mappings

AcceptEventAction_Mapping

Mapping Source

AcceptCallAction

Mapping Target

AcceptActionUsage

Owned Mappings

(none)

7.7.2.3.1.2 AcceptEventAction_Mapping

Description

The UML4SysML::AcceptEventAction is mapped to a AcceptActionUsage element.

If the trigger is a signal, it is mapped to an accept parameter typed by the signal.

SysMLv2 does not support more than one trigger. Therefore only the first specified trigger of the action is transformed. All further triggers are ignored.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action acceptEventActionSignalEvent1 accept : SysMLv1Signal via sysMLv1Port;
action acceptEventActionChangeEvent1 accept when when changeExpression.result {
          calc changeExpression {
```

7.7.3 Activities

This chapter lists all mapping specifications of UML4SysML::Activities model elements.

7.7.3.1 Overview

Table 3. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Activity	ViewDefinition ActionDefinition RequirementUsage
ActivityFinalNode	not mapped; see next section
ActivityParameterNode	not mapped; see next section
ActivityPartition	not mapped; see next section
CentralBufferNode	ActionUsage
ControlFlow	TransitionUsage SuccessionAsUsage
DataStoreNode	ActionUsage
DecisionNode	DecisionNode
ExceptionHandler	not mapped; see next section
FlowFinalNode	not mapped; see next section
ForkNode	ForkNode

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
InitialNode	not mapped; see next section
InterruptibleActivityRegion	not mapped; see next section
JoinNode	JoinNode
MergeNode	MergeNode
ObjectFlow	TransitionUsage SuccessionFlowConnectionUsage
Variable	not mapped; see next section

The following table gives an overview of which SysML v2 elements the UML4SysML::Activities elements are transformed with which mapping class. The mapping details are in 7.7.3.3.

The justifications for the elements without mapping are given in 7.7.3.2.

7.7.3.2 UML4SysML::Activities elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 4. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
ActivityFinalNode	Mapping is not specified yet.
ActivityParameterNode	The parameter of the activity is mapped from SysML v1 to SysML v2. The additional concept of the activity parameter node is necessary for the token semantic of SysML v1 activities, which is not part of SysML v2. Therefore, the additional concept of the activity parameter node is not mapped to SysML v2.
ActivityPartition	Mapping is not specified yet.
ExceptionHandler	Mapping is not specified yet.
InterruptibleActivityRegion	Mapping is not specified yet.

7.7.3.3 Mapping Specifications

7.7.3.3.1 ActivityAsDefinition_Mapping

Description

A UML4SysML::Activity is mapped to a SysMLv2 ActionDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {
  in parIn : SysMLv1Block;
  out parOut;
  out parReturn;
```

```
part def SysMLv1Block;
```

This chapter lists all mapping specifications of UML4SysML::Classification model elements.

7.7.5 CommonBehavior

This chapter lists all mapping specifications of UML4SysML::CommonBehavior model elements.

7.7.5.1 Overview

Table 6. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AnyReceiveEvent	not mapped; see next section
CallEvent	not mapped; see next section
ChangeEvent	TextualRepresentation
FunctionBehavior	ViewDefinition RequirementUsage
OpaqueBehavior	ViewDefinition ActionDefinition RequirementUsage
SignalEvent	not mapped; see next section
TimeEvent	TextualRepresentation
Trigger	AcceptActionUsage

The following table gives an overview of which SysML v2 elements the UML4SysML::CommonBehavior elements are transformed with which mapping class. The mapping details are in 7.7.5.3.

The justifications for the elements without mapping are given in 7.7.5.2.

7.7.5.2 UML4SysML::CommonBehavior elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 7. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
CallEvent	The concept of a CallEvent is not supported by SysML v2.

7.7.5.3 Mapping Specifications

```

7.7.5.3.4 OpaqueBehaviorMembership_Mapping

Description

Creates a membership relationship for *memberElement()*.

General Mappings

GenericToOwningMembership Mapping

Mapping Source

OpaqueBehavior

Mapping Target

OwningMembership with qualifier: language:String

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• OwningMembership::ownedMemberElement (in language : String) : Element [1]

```
OpaqueBehaviorSpecification Mapping.getMapped(from, language)
```

7.7.5.3.5 OpaqueBehaviorSpecification_Mapping

Description

The mapping class creates the SysML v2 TextualRepresentation elements from the languages and bodies properties of the given UML4SysML::OpaqueBehavior.

General Mappings

GenericToTextualRepresentation Mapping

Mapping Source

OpaqueBehavior

Mapping Target

TextualRepresentation with qualifier: language:String

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• TextualRepresentation::body (): String [1]

```
let index:Integer = from.language->indexOf(language) in
from. 'body'->at(index)
```

• TextualRepresentation::language (): String [1]

language

7.7.5.3.6 TimeEvent_Mapping

Description

T#3 meeting, 2022-12-14: Do not use automatic rules! Events are not single elements in SysML v2. Consider it in the transformation for AcceptEventAction, Transition

General Mappings

NamedElementMain_Mapping GenericToTextualRepresentation Mapping

Mapping Source

7.7.7 InformationFlows

This chapter lists all mapping specifications of UML4SysML::InformationFlows model elements.

7.7.7.1 Overview

Table 10. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
InformationFlow	FlowConnectionDefinition
InformationItem	ItemDefinition

The following table gives an overview of which SysML v2 elements the UML4SysML::InformationFlows elements are transformed with which mapping class. The mapping details are in 7.7.7.2.

7.7.7.2 Mapping Specifications

7.7.7.2.1 InformationFlow_Mapping

Description

A UML4SysML::InformationFlow is mapped to a FlowConnectionDefinition. If the UML4SysML::InformationFlow has defined realizingConnectors an additional FlowConnectionUsage element is created. The transformation rule is specified in the BehavioredClassifier::ownedRelationship operation. Then transformation also considers SysMLv1::ItemFlows which is handled by the factory class FlowConnectionUsage_Factory.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block {
       part partA : SysMLv1BlockA;
       part partB : SysMLv1BlockB;
       part itemC : SysMLv1BlockC;
        connection sysMLv1Connector connect partA to partB;
       message : SysMLv1InformationFlowB :> sysMLv1Connector of itemC from partA to partB;
}
part def SysMLv1BlockA;
part def SysMLv1BlockB;
part def SysMLv1BlockC;
part def SysMLv1BlockD;
connection def SysMLv1Association {
       end : SysMLv1BlockA;
       end : SysMLv1BlockB;
flow def SysMLv1InformationFlowA :> SysMLv1Association {
        item : SysMLv1BlockC;
        item : SysMLv1BlockD;
flow def SysMLv1InformationFlowB {
       end partA : SysMLv1BlockA;
        end partB : SysMLv1BlockB;
}
```

7.7.9 Packages

This chapter lists all mapping specifications of UML4SysML::Packages model elements.

7.7.9.1 Overview

Table 13. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Extension	not mapped; see next section
ExtensionEnd	not mapped; see next section
Image	not mapped; see next section
Model	Package
Package	Package
PackageMerge	not mapped; see next section
Profile	Package
ProfileApplication	not mapped; see next section
Stereotype	MetadataDefinition

The following table gives an overview of which SysML v2 elements the UML4SysML::Packages elements are transformed with which mapping class. The mapping details are in 7.7.9.3.

The justifications for the elements without mapping are given in 7.7.9.2.

7.7.9.2 UML4SysML::Packages elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 14. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
Extension	The mapping of the extension relationship is performed in the context of Stereotype_Mapping.
ExtensionEnd	The mapping of the extension end property is performed in the context of Stereotype_Mapping.
Image	Mapping is not specified yet.
PackageMerge	The concept of the PackageMerge relationship is not supported by SysML v2.

7.7.9.3 Mapping Specifications

7.7.9.3.1 ElementImport_Mapping

Description

A UML4SysML::ElementImport is mapped to a SysMLv2 MembershipImport. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
package SysMLv1Package1 {
    import SysMLv1Package2::SysMLv1Block;
    import SysMLv1Package2::SysMLv1ValueType;
}
package SysMLv1Package2 {
    part def SysMLv1Block;
    attribute def SysMLv1ValueType;
}
```

General Mappings

GenericToMembershipImport_Mapping NamedElementMain Mapping

Mapping Source

ElementImport

Mapping Target

MembershipImport

Owned Mappings

(none)

Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
if src.oclIsKindOf(UML::ElementImport) then
    Helper.hasMainMapping(src.oclAsType(UML::ElementImport).importedElement)
else
    false
endif
```

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• MembershipImport::importedMemberName (): String [0..1]

```
from.alias
```

• MembershipImport::visibility (): VisibilityKind [1]

```
Helper.getKerMLVisibilityKind(from.visibility)
```

• MembershipImport::importedMembership (): Namespace [1]

ElementOwningMembership Mapping.getMapped(from.importedElement)

7.7.9.3.2 Model_Mapping

Description

SysMLv2 has no explicit model element for a model. The UML4SysML::Model element is mapped to a SysMLv2 Package. The property "viewpoint" is mapped to a metadata defined in the SysML v1 library. The expected SysML v2 textual notation of a UML4SysML::Model with URI and viewpoint is as follows. If URI or viewpoint are not set in the source model, the metadata is not generated.

```
package SysMLv1Model {
   @SysMLv1Library::PackageData {URI="https://omg.org";}
   @SysMLv1Library::ModelData {'viewpoint'="The viewpoint of the model element.";}
```

```
ElementMain Mapping.getMapped(from.target)
```

This chapter lists all mapping specifications of UML4SysML::StateMachines model elements.

7.7.12 StructuredClassifiers

This chapter lists all mapping specifications of UML4SysML::StructuredClassifiers model elements.

7.7.12.1 Overview

Table 17. List of all mappings

*** **	
SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Association	not mapped; see next section
AssociationClass	ConnectionDefinition
Class	ViewDefinition RequirementUsage
Connector	ConnectionUsage
ConnectorEnd	not mapped; see next section
Port	PartUsage

The following table gives an overview of which SysML v2 elements the UML4SysML::StructuredClassifiers elements are transformed with which mapping class. The mapping details are in 7.7.12.2.

7.7.12.2 Mapping Specifications

7.7.12.2.1 AssociationClass_Mapping

Description

A UML4SysML::AssociationClass is mapped to a SysML v2 ConnectionDefinition. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block1;
part def SysMLv1Block2;
connection def SysMLv1AssociationBlock {
    end : SysMLv1Block1;
    end : SysMLv1Block2;
}
```

General Mappings

AssociationCommon_Mapping

Mapping Source

AssociationClass

Mapping Target

ConnectionDefinition

Owned Mappings

(none)

Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
```

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• ConnectionDefinition::ownedRelationship (): Relationship [0..*]

```
let nonOwnedEnds: OrderedSet(UML::Property) =
    (from.memberEnd-from.ownedEnd)->asOrderedSet() in
let generalizations : Set(UML::Generalization) =
    from.ownedElement->select(e | e.oclIsKindOf(UML::Generalization)) in
let others: OrderedSet(UML::Element) =
    ((from.ownedElement-from.memberEnd)-generalizations)->asOrderedSet() in
nonOwnedEnds->collect(e | NonOwnedEndMembership_Mapping.getMapped(e))
->union(from.ownedEnd->collect(e | OwnedEndMembership_Mapping.getMapped(e)))
->union(generalizations->collect(e | Generalization_Mapping.getMapped(e)))
->union(others->collect(e | ElementOwningMembership_Mapping.getMapped(e)))
->asOrderedSet()
```

7.7.12.2.2 AssociationCommon Mapping

Description

A UML4SysML::Association is mapped to a SysML v2 ConnectionDefinition. This is the abstract base class of all concrete association mapping classes.

General Mappings

```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

7.7.12.2.34 PortUntyped_Mapping

Description

A UML4SysML::Port that is untyped is mapped to a SysML v2 PortUsage.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
port sysMLv1Port;
```

7.7.13 UseCases

This chapter lists all mapping specifications of UML4SysML::UseCases model elements.

7.7.13.1 Overview

Table 18. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Actor	ItemDefinition
Extend	not mapped; see next section
ExtensionPoint	not mapped; see next section
Include	IncludeUseCaseUsage
UseCase	UseCaseDefinition

The following table gives an overview of which SysML v2 elements the UML4SysML::UseCases elements are transformed with which mapping class. The mapping details are in 7.7.13.3.

The justifications for the elements without mapping are given in 7.7.13.2.

7.7.13.2 UML4SysML::UseCases elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 19. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
Extend	The semantics of the UML4SysML::Extend relationship is not supported by SysML v2.
ExtensionPoint	The semantics of the UML4SysML::Extend relationship is not supported by SysML v2 Therefore, UML4SysML::ExtensionPoint is also not covered by the transformation.

7.7.13.3 Mapping Specifications

7.7.13.3.1 Actor_Mapping

Description

A UML4SysML::Actor is mapped to a SysML v2 ItemDefinition. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

item def SysMLv1Actor;

General Mappings

Mapping Source

Include

Mapping Target

FeatureTyping

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

```
• FeatureTyping::type(): Type[1] from.addition
```

7.7.13.3.4 UseCase_Mapping

Description

A UML4SysML::UseCase is mapped to a SysML v2 UseCaseDefinition. The expected SysML v2 textual syntax of a mapped UML4SysML::UseCase with a defined subject is as follows.

```
use case def SysMLv1UseCase {
   subject subject_SysMLv1Block : SysMLv1Block;
}
part def SysMLv1Block;
```

Currently, only one use case subject is supported by the mapping class. Since the UML4SysML::Extend relationship is not considered by the SysML v1 to SysML v2 transformation, the extension points of a use case are also not mapped.

```

7.8 Mappings from SysML v1.7 stereotypes

7.8.1 Overview

The following subclauses of Mappings from SysML v1.7 stereotypes are organized according to the main packages of SysML v1.

7.8.2 Activities

This chapter lists all mapping specifications of SysML::Activities model elements.

7.8.2.1 Overview

Table 22. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Continuous	MetadataUsage
ControlOperator	
Discrete	MetadataUsage
NoBuffer	
Optional	
Overwrite	
Probability	MetadataUsage
Rate	MetadataUsage

The following table gives an overview of which SysML v2 elements the SysML::Activities elements are transformed with which mapping class. The mapping details are specified in 7.8.2.3.

The justifications for the elements without mapping are given in 7.8.2.2.

7.8.2.2 SysML::Activities elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 23. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
ControlOperator	The concept that an action can control other actions is not supported by SysML v2.
NoBuffer	Mapping is not specified yet.

SysML v1 Concept	Rationale
Optional	The stereotype states that the lower multiplicity of the parameter is 0. Since the multiplicity of the parameter is transformed, the additional statement that the parameter is optional is redundant. Therefore, the stereotype is not considered in the transformation.
Overwrite	Mapping is not specified yet.

7.8.2.3 Mapping Specifications

7.8.2.3.1 ProbabilityMetadataUsage_Mapping

Description

A SysML::Activities::Probability is mapped to a SysML v2 MetadataUsage owned by the appropriate target element of the UML4SysML::ActivityEdge or UML4SysML::ParameterSet.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {
   action sysMLv1Action1;
   succession sysMLv1ControlFlow1 first sysMLv1Action1 then sysMLv1Action2 {
      @SysMLv1Library::ProbabilityData {probability = 0.42;}
   }
   action sysMLv1Action2;
}
```

```

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• OwningMembership::ownedMemberElement (): Element [1]

```
ProbabilityMetadataUsage Mapping.getMapped(from)
```

7.8.2.3.8 RateMetadataUsage_Mapping

Description

A SysML::Activities::Rate and the specializations SysML::Activities::Discrete and SysML::Activities::Continuous are mapped to a SysML v2 MetadataUsage owned by the appropriate target element of the UML4SysML::ActivityEdge or UML4SysML::Parameter.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like

```
succession flow sysMLv1ObjectFlow of SysMLv1Block
  from sysMLv1Action1.outputValue to sysMLv1Action1.inputValue {
     @SysMLv1Library::RateData {isDiscrete = true;}
}
```

The mapping of the rate instance value is not supported yet.

7.8.2.3.18 Model Libraries

7.8.2.3.18.1 ControlValues

7.8.2.3.18.1.1 ControlValueKind

The enumeration ControlValueKind is mapped to the SysML v2 enumeration definition SysMLv1Library::Enumerations::ControlValueKind (see <u>7.3.2</u>).

7.8.3 Allocations

This chapter lists all mapping specifications of SysML::Allocations model elements.

7.8.3.1 Overview

Table 24. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Allocate	AllocationUsage
AllocateActivityPartition	

The following table gives an overview of which SysML v2 elements the SysML::Allocations elements are transformed with which mapping class. The mapping details are in 7.8.3.3.

The justifications for the elements without mapping are given in 7.8.3.2.

7.8.3.2 SysML::Allocations elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 25. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
AllocateActivityPartition	Mapping is not specified yet.

7.8.3.3 Mapping Specifications

7.8.3.3.1 Allocation_Mapping

Description

A SysML::Allocations::Allocate is mapped to a SysML v2 AllocationDefinition if it is an allocation between definition elements.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {
       action sysMLv1Action;
part def SysMLv1Block {
       part sysMLv1PartProperty : AnotherSysMLv1Block;
part def AnotherSysMLv1Block;
// Allocation of definition
allocation def SysMLv1Allocation {
       end :>> source : SysMLv1Activity;
       end :>> target : SysMLv1Block;
}
// Allocation of usage
allocation def {
       end :>> source : SysMLv1Activity;
       end :>> target : SysMLv1Block;
       allocate source.sysMLv1Action to target.sysMLv1PartProperty;
// Allocation of usage to definition
```

```
allocation def {
    end :>> source : SysMLv1Activity;
    end :>> target : SysMLv1Block;
    allocate source.sysMLv1Action to target;
}
```

7.8.4 Blocks

This chapter lists all mapping specifications of SysML::Blocks model elements.

7.8.4.1 Overview

Table 26. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AdjunctProperty	
BindingConnector	BindingConnectorAsUsage
Block	PartDefinition PartDefinition
BoundReference	
ClassifierBehaviorProperty	
ConnectorProperty	
DistributedProperty	
EndPathMultiplicity	
NestedConnectorEnd	
ParticipantProperty	
PropertySpecificType	
ValueType	AttributeDefinition

The following table gives an overview of which SysML v2 elements the SysML::Blocks elements are transformed with which mapping class. The mapping details are in 7.8.4.3

SysML v1 defines special property concepts, but they are not stereotypes or metamodel elements and thus do not all have an explicit mapping class. The following table shows how they are mapped.

SysML v1 Property Concept	SysML v2 Element	Main Mapping Class
Property typed by a Class or Interface	OccurrenceUsage with isComposite=false	PropertyTypedByClassInterface_Mapp
Part Property	PartUsage with isComposite=true	PartProperty_Mapping
Value Property	AttributeUsage with isComposite=true	Attribute_Mapping
ConstraintProperty	AssertConstraintUsage	not defined yet
ReferenceProperty typed by a Block	PartUsage with isComposite=false	PartProperty_Mapping
ReferenceProperty typed by a ValueType	AttributeUsage with isComposite=false	Attribute_Mapping
ReferenceProperty typed by Class or Interface	OccurrenceUsage with isComposite=false	PropertyTypedByClassInterface_Mapp

The justifications for the elements without mapping are given in 7.8.4.2.

7.8.4.2 SysML::Blocks elements not mapped

In this section, missing transformation rules of $SysML\ v1$ elements to $SysML\ v2$ are justified for each individual element in the following table.

Table 27. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
AdjunctProperty	The concept of adjunct properties is not needed in SysML v2, where the principal of the adjunct property can be used directly in the appropriate place.
BoundReference	Mapping is not specified yet.
ClassifierBehaviorProperty	The classifier behavior is already mapped to a property which also plays the role of the classifier behavior property. Therefore, there is no explicit mapping of a classifier behavior property.
ConnectorProperty	The connector property is a special case of an adjunct property and is not mapped, just like the adjunct property.
DirectedRelationshipPropertyPath	The stereotype is abstract is therefore not mapped. The concept of the DirectedRelationshipPropertyPath is included in the SysML v2 language.
DistributedProperty	Mapping is not specified yet.
ElementPropertyPath	The stereotype is abstract is therefore not mapped. The concept of the ElementPropertyPath is included in the SysML v2 language.
EndPathMultiplicity	Mapping is not specified yet.
NestedConnectorEnd	The concept of NestedConnectorEnd is already included in the SysML v2 language. It is not required to do an explicit mapping.
ParticipantProperty	Mapping is not specified yet.
PropertySpecificType	Mapping is not specified yet.

7.8.4.3 Mapping Specifications

7.8.4.3.1 AssociationBlock_Mapping

Description

An AssociationBlock is mapped to a SysML v2 ConnectionDefinition.

The SysML::Blocks::ParticipantProperties transformation is not defined yet. Therefore, the mapping is currently identical with the mapping of UML4SysML::AssociationClass.

General Mappings

AssociationClass Mapping

Mapping Source

AssociationClass

Mapping Target

ConnectionDefinition

Owned Mappings

(none)

Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

7.8.4.3.2 BindingConnector_Mapping

Description

A SysML::Blocks::BindingConnector is mapped to a SysML v2 BindingConnectorAsUsage.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block1 {
        part sysMLv1PartProperty1 : SysMLv1Block2;
        part sysMLv1PartProperty2 : SysMLv1Block2;

        binding sysMLv1BindingConnector
            bind sysMLv1PartProperty1 = sysMLv1PartProperty2;
}
part def SysMLv1Block2;
```

General Mappings

Connector Mapping

Mapping Source

Connector

Mapping Target

BindingConnectorAsUsage

Owned Mappings

(none)

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not src.oclIsTypeOf(UML::AssociationClass)
  and Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
  and not Helper.hasStereotypeApplied(src, 'SysML::ConstraintBlocks::ConstraintBlock')
  and not Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::InterfaceBlock')
```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

7.8.4.3.4 EncapsulatedBlock_Mapping

Description

A SysML::Block with *isEncapsulated=true* is mapped to a SysML v2 PartDefinition, and, additionally, gets a metadata feature defined by the SysML v1 library which represents the SysML v1 isEncapsulated property.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1EncapsulatedBlock {
   @SysMLv1Library::BlockData {isEncapsulated = true;}
}
```

General Mappings

Block Mapping

Mapping Source

      (p.association.oclIsUndefined() or p.association.ownedEnd->excludes(p))
else
   false
endif
```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

7.8.4.3.13 Model Libraries

7.8.4.3.13.1 PrimitiveValueTypes

The SysML v1 model library PrimitiveValueTypes contains primitive types that are mapped to the appropriate scalar values in SysML v2.

7.8.4.3.13.1.1 Boolean

The SysML v1 primitive type Boolean is mapped to the SysML v2 ScalarValues::Boolean element.

7.8.4.3.13.1.2 Complex

The SysML v1 primitive type Complex is mapped to the SysML v2 ScalarValues::Complex element.

7.8.4.3.13.1.3 Integer

The SysML v1 primitive type Integer is mapped to the SysML v2 ScalarValues::Integer element.

7.8.4.3.13.1.4 Number

The SysML v1 primitive type Number is abstract. Therefore, no mapping is defined for it.

7.8.4.3.13.1.5 Real

The SysML v1 primitive type Real is mapped to the SysML v2 ScalarValues::Real element.

7.8.4.3.13.1.6 String

The SysML v1 primitive type String is mapped to the SysML v2 ScalarValues::String element.

7.8.4.3.13.2 UnitAndQuantityKind

The SysML v1 model library UnitAndQuantityKind contains the blocks Unit and QuantityKind.

7.8.4.3.13.2.1 QuantityKind

The mapping of the SysML v1 QuantityKind element is not specified yet.

7.8.4.3.13.2.2 Unit

The mapping of the SysML v1 QuantityKind element is not specified yet.

7.8.4.3.14 ValueType_Mapping

Description

A SysML::Blocks::ValueType is mapped to a SysML v2 AttributeDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

attribute definition SysMLv1ValueType;

7.8.7 PortsAndFlows

This chapter lists all mapping specifications of SysML::PortsAndFlows model elements.

7.8.7.1 Overview

Table 31. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AcceptChangeStructuralFeatureEventAction	AcceptActionUsage
AddFlowPropertyValueOnNestedPortAction	
ChangeStructuralFeatureEvent	
DirectedFeature	PerformActionUsage
FlowProperty	

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
FullPort	PartUsage
InterfaceBlock	PortDefinition
InvocationOnNestedPortAction	
ItemFlow	
ProxyPort	
TriggerOnNestedPort	
~InterfaceBlock	PortDefinition

The following table gives an overview of which SysML v2 elements the SysML::Ports&Flows elements are transformed with which mapping class. The mapping details are in 7.8.7.3.

The justifications for the elements without mapping are given in 7.8.7.2.

7.8.7.2 SysML::Ports&Flows elements not mapped

In this section, missing transformation rules of SysML v1 elements to SysML v2 are justified for each individual element in the following table.

Table 32. List of SysML v1 elements not mapped of this section

SysML v1 Concept	Rationale
AddFlowPropertyValueOnNestedPortAction	Mapping is not specified yet.
ChangeStructuralFeatureEvent	Mapping is not specified yet.
FlowProperty	Mapping is not specified yet.
InvocationOnNestedPortAction	Mapping is not specified yet.
TriggerOnNestedPort	Mapping is not specified yet.

7.8.7.3 Mapping Specifications

7.8.7.3.1 AcceptChangeStructuralFeatureEventAction_Mapping

Description

The SysML::PortsAndFlows::AcceptChangeStructuralFeatureEventAction element is mapped to SysML v2 AcceptActionUsage. The details of the mapping are not defined yet.

General Mappings

AcceptEventAction_Mapping

Mapping Source

AcceptEventAction

Mapping Target

AcceptActionUsage

Owned Mappings

(none)

Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src,
'SysML::Ports&Flows::AcceptChangeStructuralFeatureEventAction')
```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

7.8.7.3.2 CommonFullPort_Mapping

Description

The abstract mapping class is the base class of the mapping classes for the SysML::Ports&Flows::FullPort mappings.

General Mappings

PropertyCommon Mapping

->including(MultiplicityMembership_Mapping.getMapped(from))->asSet()
->including(FullPortMetadataOwningMembership_Mapping.getMapped(from))
```

7.8.7.3.3 FeatureDirectionKind

7.8.7.3.4 FlowDirectionKind

7.8.7.3.5 FullPort_Mapping

Description

A SysML::Ports&Flows::FullPort element is mapped to a part usage in SysML v2 with metadata that marks the part usage as a full port. The metadata is defined in the SysML v1 library for SysML v2.

The mapping class FullPortUntyped_Mapping does the same for full ports that have no type.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part sysMLv1FullPort : SysMLv1Block {SysMLv1Library::PortData {isFullPort = true;}}
```
